Thread: [\[C#\] Are you gay virus \(Kinda\)](#)

xSilent - November 13, 2010, 7:30 am

I was really bored when I made this. It was either this or play MW2 and I said f*** MW2.

So yeah, preview and download

Spoiler [\(Click to View\)](#)

\\TODO

Add startup, looping, all that other crap.

<http://www.mediafire.com/?4iqg88lrlta111v>

Have fun doing whatever.

The reason its 5 megs is because of the 30 second WAV.

Mr Slothells - November 13, 2010, 7:34 am

Does this change your background too, Or is that just the way you roll?

Black-Blood™ - November 13, 2010, 7:35 am

xDDDD Awesome I'll test this out with my vics !

Thank you ^^

xSilent - November 13, 2010, 7:36 am

(Nov 13, 2010 08:34 AM)llamahitman Wrote: [\[CITE\]](#) Does this change your background too, Or is that just the way you roll?

Helll no, download the source and you'll see it changes the background.

This is my background: <https://gyazo.com/effc2754bed81b837606888617a618de.png>

(Nov 13, 2010 08:35 AM)Black-Blo0d Wrote: [\[CITE\]](#) xDDDD Awesome I'll test this out with my vics !

Thank you ^^

Have fun screwing with people's heads. ?

The French - November 13, 2010, 7:47 am

AHAHA , amazing nice job dude.

Local Celeb - November 13, 2010, 8:19 am

This is a pretty cool prank :3

I'm adding this to my compilation :)

Jeff. - November 13, 2010, 8:26 am

My victims will not see this coming muhahahahaha.

xCocaine - November 13, 2010, 10:23 am

Hahahahahahahah this make me laugh xD

Pulser - November 13, 2010, 10:47 am

Hey xSilent, don't you think it would be easier to use a GIF? That way you don't have to upload to youtube and you can just post it straight on the board with [IMG] [/ IMG] ?

xSilent - November 13, 2010, 10:59 am

(Nov 13, 2010 11:47 AM)Mr. Predictable Wrote: [\[CITE\]](#) Hey xSilent, don't you think it would be easier to use a GIF? That way you don't have to upload to youtube and you can just post it straight on the board with [IMG] [/ IMG] ?

I always use gifs, but then you wouldn't have heard the song.

Pulser - November 13, 2010, 11:12 am

OOO that makes sense. ?

quintz - November 17, 2010, 12:14 pm

thanks for this. i fucking HATE cod

t3h h4x - November 17, 2010, 6:58 pm

holy shit that's tight ;)

asdealmeida16 - December 2, 2010, 10:37 pm

Awesome to fool around with your friends. I only wish you could import mp3 though....anyways, this is gonna be usefull!!!

HotN - December 3, 2010, 12:27 am

ima send it to all my friends lol

<http://www.#!/?d=6XU6KVV7>

Sia - December 3, 2010, 12:49 am

it's not a virus if it don't replicate it self. i've said it so many times and i say it again it's NOT a virus

Eleqtriq - December 3, 2010, 12:56 am

Damn I can't use this, that is already my background and I play that song on loop all day.

HotN - December 3, 2010, 12:57 am

(Dec 3, 2010 01:49 AM)VirtualDUDE Wrote: [\[CITE\]](#) it's not a virus if it don't replicate it self. i've said it so many times and i say it again it's NOT a virus

what if it puts itself in the startup of the computer and crashes it everytime the computer starts up?

would that not be considered a virus?

or what if it reads the start and the end of a harddrive extremely fast and breaks the needle of the harddrive in a few minutes?

is that also not a virus?

a virus doesnt need to replicate itself to be a virus.

or would you call a program that oblitterates a computer's hardware just a program??

Sia - December 3, 2010, 1:02 am

a virus doesnt need to replicate itself to be a virus.

or would you call a program that oblitterates a computer's hardware just a program??NO NO AND NO

a virus replicates itself to random sectors on your drive.... thats what makes it a virus

if it copies itself to startup then it's basically doing the same as many legit softwares are.

and if it crashes the computer each startup then thats called "malicious activity" witch is considered being a piece of malware MALWARE and NOT a virus

HotN - December 3, 2010, 1:04 am

ahh fine...

i guess they are also called trojan malaware... :(

Have you ever heard of hmm I don't know, doing it yourself? ?

Its a long shot I know, but you could give it a shot. ?

Sia - December 3, 2010, 1:08 am

(Dec 3, 2010 02:04 AM)HotN Wrote: [\[CITE\]](#) then what do you call a trojan virus?

DUDE a trojan horse makes itself run as a administrator and allows the hacker to comprise the computer trough the piece of malware known as a trojan horse (although theres different variants of a trojan they all have one thing in common - they make themself run as a administrator without the user vertifieng it)

HotN - December 3, 2010, 1:10 am

why make the english language so specific? its not ment to be specific...

otherwise girls wouldnt be so confusing :P

wrong again... a virus is a malware type just like a

trojan

spyware

rootkit

and so on....

if you want to refer to any malicious activity you say "malware"

Code The term "virus" is also commonly but erroneously used to refer to other types of malware what hes saying is that people commonly mistake a virus for malware... they switch the two words up and call viruses malware when it's infact that malware is any type of malicious activity

HotN - December 3, 2010, 1:17 am

[Malware - Wikipedia, the free encyclopedia](#)

Wikipedia Wrote:Malware includes computer viruses, worms, trojan horses, spyware, dishonest adware, scareware, crimeware, most rootkits, and other malicious and unwanted software or program.

HotN - December 3, 2010, 1:28 am

(Dec 3, 2010 02:18 AM)VirtualDUDE Wrote: [\[CITE\]](#) not at all. you simply misunderstand what the publisher of the artical was trying to say in the statementyou obviously lack english skills, since you failed to read the part about how the term virus is basically used to describe programs that

intentionally do bad stuff to your computer.

for example, c99 shell shows up as a trojan virus on my virus scanners, yet it doesnt self replicate. "Malware, short for malicious software, is software designed to secretly access a computer system without the owner's informed consent." from wiki: <http://en.wikipedia.org/wiki/Malware>

doesn't that basically state that every program on everyone's computer is malaware since we technically have no idea what ever program is doing to our computers.

Sia - December 3, 2010, 1:46 am

(Dec 3, 2010 02:28 AM)HotN Wrote: [\[CITE\]](#) you obviously lack english skills, since you failed to read the part about how the term virus is basically used to describe programs that intentionally do bad stuff to your computer.

doesn't that basically state that every program on everyone's computer is malaware since we technically have no idea what ever program is doing to our computers.

you obviously have a lack of logic Quote:c99 shell shows up as a trojan virus on my virus scanners dumbass trojans and viruses are two different types of malwares

if a shell turns up as a trojan virus (witch it wont) then it means it contains characteristics of these types of malware.

my english may fail at the moment but your logic is completly fucked up if you can't understand something as simple as that

edit:

you may be reading the text on wikipedia but you're forgetting to read between the lines (UNDERSTANDING THE TEXT!)

HotN - December 3, 2010, 2:07 am

edit:

you may be reading the text on wikipedia but you're forgetting to read between the lines (UNDERSTANDING THE TEXT!)hey "dumbass"

how many times do i have to quote it,

"As stated above, the term "computer virus" is sometimes used as a catch-all phrase to include all types of malware, even those that do not have the reproductive ability. " from wiki:

http://en.wikipedia.org/wiki/Computer_virus

this is not a debate about logic, its a debate about the english language, and when it comes to the language, it's not about what's right and wrong, it's about commonality. And since programs that are intended to do harm are most commonly called viruses, than they are viruses since the definition of the word is not the same as your ohhh soo flawless dictionary.

laptopguy - December 3, 2010, 2:09 am

It was amusing watching the background change then YMCA come on. Good work. ?

alexone2008 - December 4, 2010, 7:36 am

VirtualDUDE is right about what he is saying... A virus makes clones of it self.. infects other programs... from biology that's a virus...

anything else is malware including and viruses...trojan horse is not a virus... its a malware that looks like something else... a game or something but behind that

is a malware... malware is the root and virus is at the end of the tree...

The application you made it might be fun.. but for sure IS NOT A VIRUS... in my opinion not even a malware...
