Thread: [Basics Of Hacking Sky WiFi For A Noobie ?](#)

JORD4N - November 13, 2010, 9:18 am

SKY65737, Well what it is i have been kicked out so im living in a bedset and no internet company will install sky for a bedsit as it is a temorary address and i will be moved into a flat in like 2onths, the main office has a sky router how would i hack it ? people are allways in there so i can run in there a take a photo of the key as i will get caught for sure.

I have never did anything like wap/wep cracking before could you let me know the basics on what i have todo ? if you cant post here as its not my own router could you pm me a good link please :) im using phone internet :/

OK learn to use the search function and look at the forum you are posting in before posting... Welcome to HF btw...

Basically you need to find out what type of encryption the network is using, if it is WEP or WPA. Once oyu knwo that then read a tutorial on how to crack it. Note you will need to have a wireless adapter capable of packet injection.

Wow really... ?

Just do what Middle said and forget about this idea.

Taking a pic of the... wait what?

If you have physical access to a computer that is connected you could use WirelessKeyView to view all the stored wireless passwords. But that is only if you can access the computer.

Well that is only any good if A) it is there and B) If they haven't changed it from the default.

If you are in a position to do that then you could just put WirelessKeyView on a usb stick...
