Thread: [\[Help\] Installing Snow Leopard on my laptop](#)

PkerkidHD - November 16, 2010, 8:36 pm

Hi,

Recently I borrowed A Snow Leopard retail disk from my friend. So I can install Snow Leopard on my PC. I have a AMD Athlon x2 (64) processor. I read some guides and followed the steps but most of them don't work when I boot the DVD Darwin will boot and restart my computer right away.

Does anyone know how I would be able to install Snow Leopard on my PC?

Heres the specs:

Quote:Compaq CQ50-215CA

Base Features

Hard Drive Speed/Capacity 160GB 5400RPM

Optical Drive 8X SuperMulti DVD±R/RW With Double Layer

Processor Speed 1.90GHz

Processor Type AMD Athlon X2 QL-60 Dual-Core

RAM 3GB DDR2

Graphics

Graphics Chipset NVIDIA GeForce 8200M

Integrated Video Memory Yes

Native Screen Resolution 1280 x 800

Video Memory Up to 895MB

Audio

Audio Chipset Altec Lansing

Audio Output Stereo

Networking

Ethernet Port 10/100BASE-T

Integrated Bluetooth No

Integrated WiFi 802.11b/g WLAN

Computing Features

Processor Cache 1MB L2

Removable Storage No

System Bus 1800MHz

Bios

Phoenixbios

I tried using Tiger Jas 10.4.8, Leopard-10.5.2-AMD-EFI-Rev2 those still don't work.

Good luck.

Thanks but I already tried this method. The thumb drive doesn't boot when I start up my computer. I set all Usb settings to launch first before my hard drive.
