Thread: [\[VB.NET\] Reading/Writing Resources via Codedom](#)

DarkShadowz - November 21, 2010, 12:28 am

Well, I was just trying to recreate the managed resource data storage method for my crypter, and I was wondering if some people may find this useful for recreating the managed resource data storage method themselves.

Writing the Resource:

Code 'To Create Resource File

Using R As New Resources.ResourceWriter(Application.StartupPath &

"\ResourceFileName.resources")

R.AddResource("resourcenamewhere", "file data/string/image here")

R.Generate()

End Using

'To Include Resource File

parameters.EmbeddedResources.Add(Application.StartupPath & "\ResourceFileName.resources")

'To Delete Resource File After Use

If IO.File.Exists(Application.StartupPath & "\ResourceFileName.resources") Then :

IO.File.Delete(Application.StartupPath & "\ResourceFileName.resources") : End If

Reading the Resource:

Code Dim resourceManager As New Resources.ResourceManager("ResourceFileName",

Assembly.GetExecutingAssembly)

'Reading bytes from Resource File

Dim resourceBytes As Byte() = DirectCast(resourceManager.GetObject("resourcenamewhere"),
Byte())

'Reading a string from Resource File

Dim resourceString As Byte() = resourceManager.GetString("resourcenamewhere")

Hope you guys find this useful ^_^.

iRtehLeet™ - November 21, 2010, 12:29 am

Stop feeding leechers lol

Alison Wonderland - November 21, 2010, 12:30 am

thanks man. Looks good.

Hope it works (If i use it)

DarkShadowz - November 21, 2010, 12:31 am

Lol sorry, though I haven't posted anything much to contribute to the community for ages <_<.

Besides, leechers won't know how to use this in their work xD.

Well, atleast it is kind of leech-proof if they do not know what to do with it.

bloodqman - November 22, 2010, 4:21 am

thanks i needed this.. i'll look around for some other samples too..

DarkShadowz - November 24, 2010, 2:35 am

Oh god, 112 views and only a few people replied. Leech much?

Can't believe you guys aren't even trying to use it for your crypters lol.

pr0t0typ3 - November 24, 2010, 4:38 am

Can't believe you guys aren't even trying to use it for your crypters lol.

90 % of all viewers don't understand it but they are trying to leech anyway, 2 % Already knew it and the rest is leeching it with understanding it.

P.S. 122 Views is very little.. I had 10k Downloads on my CodeDom Crypter Source and 200 replies

DarkShadowz - February 7, 2011, 11:49 am

Bump, trying to show people a way to make a less leeched crypter (sorta).

Adept - February 13, 2011, 12:42 pm

How would i go about using this in my crypter. I also have prototypes source for the codedom. It is 7 out of 16 fud on nvt i was wondering how to make it more fud???

Morbid Saint - June 10, 2011, 3:03 am

Looks very nice bro thanks for the share. :)

.CRz - June 10, 2011, 5:08 am

i'm not like others, i dont leech, i larn and mod for my personal use.

Thanks, this was wath i am searching for, it looks like you fall from the sky at the right moment xD

man, 627 views and no only 12 posts? just dont understand this people.

try encrypt the code with some errors, maybe that stop's +50% of leeching.

Greetings and if i was l33t + rep ;)

PS: Hehe, 100 POsts ;)

felicixus - June 12, 2011, 6:24 am

this make your exe file detected from 3 antivirus: Zoner antivirus, A-Squared Security, IKARUS Security

i dont think so, i had an good experience in learning this and trying change some methods.?
and i just bypassed avira becuse of storage method. ?

TheDubWubCub - June 12, 2011, 11:51 am

thanks for the share, ima use this for my next upcoming project (will give credits) :D

.CRz - June 12, 2011, 12:02 pm

i already have it added in my credits List ;)

Great and usefull share

but this would be better if was an image(anti-Hard-Leech)

PedroDJ - August 1, 2011, 8:28 am

Ok,

let's try.

Thank you for the thread ;)

z4rzhi - August 1, 2011, 8:40 am

meh, what a waste of time. VB is such a lazy language

StaTiX - August 1, 2011, 9:56 am

Thanks for the example mh8t.

idonotcare - August 4, 2011, 3:25 am

Nope, it only makes it A-squard and ikarus and both are bypass able.

Banks? - August 4, 2011, 3:39 am

Actually very very possible to undetect this.

bob42 - August 18, 2011, 4:15 pm

Thank you for sharing this. Its not hard to understand.

Pumpkins - September 4, 2012, 12:50 pm

many many thanks, it was doing my head in for a while :)

Starz- - September 5, 2012, 8:41 pm

Thanks for the Share to the HF Community

breezer - September 6, 2012, 1:55 am

very useful for newbies, thank you
we can translate it to c# easily
