?hack_addicted.pt SQLi Scanner ?

--Status:[online]--

I HIGHLY recommend you to use this SQLi Scanner, and not .exe tools!

Side Note: Better dork = more results! Keep that in mind!

Note: This scanner is coded by r3m1ck, a very famous Indonesian Coder, i just modded it and uploaded it.

?Explained: Online SQLi Scanner ?

It does a shearch in google, using specific words called dorks

Imagine you put this in google:

inurl:php?id+gov

and you get a list of results: 6.980.000 results in (0,22 secs)

now to check the ones vulnerable would take you for ever if you check one by one manually, so what this script does, it puts a ' at the end of the url and shearch for specific words that would be the ones you see when you check it manually.

example (script working):

google shearch result:

<http://www.thurrock.gov.uk/libraries/libinfo/content.php?page=library>

Code <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Strict//EN"

"http://www.w3.org/TR/xhtml1/DTD/xhtml1-strict.dtd">

<html xmlns="http://www.w3.org/1999/xhtml" xml:lang="en" lang="en">

<head>

<title>Thurrock Council | Library Information | Library Information</title>....

turns to:

<http://www.thurrock.gov.uk/libraries/libinfo/content.php?page='library>

Code <p>Error: Could not query the database.</p><p>Please try again later.</p>

[b]<!--[b] 1064: You have an error in your SQL syntax; check the manual that corresponds to your MySQL server version for the right syntax to use near 'library'

LIMIT 1' at line 22 -->

So the script knows that the website is vuln.

And displays the result.

Any question fell free to ask. ?

What is the function of sql anyway... ? i am noob.. :)

z0si - November 25, 2010, 11:50 pm

Source please.
Also...

This is not new... Theres lots of online SQLi scanners...

<http://t3mp3.isgreat.org/scanner.php/>

<http://revtan.site40.net/scanner/>

Does it bypass the Google block? If not than it's no better.
