nofear1999 - November 26, 2010, 11:20 am

Question, does this Mailer enable HTML format?

Not sure. I just coded a basic one and I don't know if that is default. You can try. If it doesn't I can attempt to make one?

Both FUD, but maybe BINDED -.-!Dunno. You can submit to Virustotal.com if you want. Sometimes ESET said it scanned 2 files or 0 files when I scanned shit, that's why I switched to Avira.

-Nemesis- - December 29, 2010, 12:42 am

can this be used for advertising? (load it with a big mailing list and send 1 message to each address) if yes, what speed does it gain? (MPS)

That's what it's made for.

It depends on your net speed & CPU speed.
