Check your firewall and antivirus settings, one of them might be preventing it.

(Nov 28, 2010 12:12 PM)fee Wrote: [\[CITE\]](#) This is a Vlrus. NO LEGIT..

If the application is detected, then there false positives.

(Nov 28, 2010 07:26 PM)sh1k4m4ru Wrote: [\[CITE\]](#) HOw does password recovery work?
When you click 'recover msn passwords' it should instantly recover it from the registry.

OfficialNutty - November 29, 2010, 4:32 pm

How does it get the passwords? o.o

kallell - November 29, 2010, 11:24 pm

So are there any working freezers anymore?

Of course the application is going to be detected, it contains stuff like a keylogger and uses two modules for the password recovery that are often used in password stealers.

Problem with msn freezers is they don't work if you have your password saved, otherwise id use something like this.
