iBoot by eXero

I got the source to that 500k booter, and I made my own version of it. I cleaned up the GUI and customized it a little bit, and I cleaned up and edited the code a little bit. I hope you guys like it! [V2.0](#)

Ag3nt - November 28, 2010, 4:13 pm

Doesnt hit for shit :(
It works on all other fronts, (DNS to IP) but it doesnt hit for shit. I couldnt take down a site with 500mb bandwidth.

Lol it's going to take a while to format 1.5k sites the correct way in the code. May be a week or two because I am busy.
