What Is Spreading?

Spreading Is The Way Your Program/Trojan/ETC Circulates Around The Internet. This Means That People At Some Point People Spread It For. This Is Your Goal, To Put Something Out There That Is Not Wide Spread And Is Hard To Find. It Is All About Finding That Niche (A Targeted Group Of People, Like Gamers) That Want Something, But Do Not Have It Yet. When This Is Done, People Will Download It And Put It On Their Site For Download or Put It On A Torrent.

Getting Started

1. Finding The Right Program

This Will Be The Hardest Part. Finding Out What Is Wanted At A Certain Point In Time Is Hard. Find Out What Niche You Want To Go After, For Example If You Are Going After Gamers, But Not Just Gamers, Letâ€™s Say Gamers That Use Steam. You Have A Couple Of Options. One Is You Can Look Around The Net That Will Focus Directly On Steam Gamers (Screen Recorders, Voice Changers, etc.). Another Is You Can Make Your Own Program; This Will Insure That There Is Nothing Else Like It, But Make Sure That The Program Is Useful And It Works. After You Think You Have Found The Right Program, Upload It To Some WareZ (Media Sharing) Sites, Like WareZ-BB.org And Some Torrent (Peer-To-Peer Sharing) Sites, Like #.org To See How Many Downloads You Can Get In A Day. If The Number Is Below 25 Try Another Program. While 25 Is Decent Number For Beginners, It Is Just Not Enough To Make A Big Impact On The Net. Stay Away From Large Programs (Over 75 MB).

2. Infecting The Program

This Will Either Require Money Or Programming Knowledge. If You Choose To Infect The Program That You Found You Make Sure What Ever You Are Infecting It From Is FUD (Fully Undetectable To Anti-Virus Software). To Achieve This You Will Need A Crypter (A Program That Changes The Programs Code To Make It Look It Different When Scanned By Anti â€ Virus Software). You Can Either Learn To Code One Of These, Which Is The Cheaper Way, But Is Time Consuming Or You Can Buy One From Many Of The Hacking Forums Out There, Like Ukn0wn.ws. They Can Cost Anywhere From \$25 To \$80. After You Infect The Program Run It Through The Crpyter To Make It FUD.

Where To Spread?

This Is The Big Question. Knowing Where To Spread You Just Have To Go With Your Instinct, But Below You Will Find A List Of Sites And Site Types I Found Useful In My Spreading.

â€ WareZ Sites

- o [Http://www.warez-bb.org](http://www.warez-bb.org)
- o [Http://www.Project-W.org](http://www.Project-W.org)
- o Bookmark Any WareZ Sites You Come Across

â€ Torrents

- o [Http://www.#.org](http://www.#.org)
- o [Http://www.MiniNova.org](http://www.MiniNova.org)

o [Http://www.Demonoid.com](http://www.Demonoid.com)

o Private Torrent Sites Are The Best, Because People Are Trustworthy On There

â€¢ Forums (Based On Your Niche)

o I Cannot Post Any Links, Because Depending On What Type Of Niche You Chose You Will Need To Find Those Types Of Forums.

â€¢ Youtube

o Make A Short Video, No More Than 30 Seconds That Has The Description (Read On That Below). Make Sure To Have Appropriate Music. After The Video Is Uploaded And Processed Submit The URL To Things Like StumbleUpon (Link Sharing) And Digg.com (Social News Site).

What Do I Put?

The Description Is Where It Makes Or Breaks Your Spreading. Make Sure You Always Use The Same Description. This Allows Easy Copy/Paste For The People That Will Post The Program Elsewhere.

â€¢ Take At Least 1 Screen Shot Of The Program. Upload That To A Good Image Hosting Site, Like www.imgur.com

â€¢ Choose A Good File Host Where You Can Track The Number Of Downloads You Are Getting. If You Use #.com Then Get A Legit Account. I Use <http://www.FileQube.com>, It Is Free And It Tracks Page Views and Downloads, And It Accepts A Lot Of File Types.

â€¢ Write Out A Well Thought Out Description That Talks About How The Program Works, What The Features Are, ETC.

â€¢ When Your Infected Is FUD, Upload It To

<http://scanner.novirusthanks.org/index.php?options=1> Making Sure To Check "Do Not Distribute The Sample". This Site Scans Your File With All Of The Major Anti Virus Software. That Check Box Makes Sure They Do Not Send Their Findings To The Anti- Virus Companies, This Means Your Program Will Stay FUD Longer. After It Is Done Grab The BB Code And HTML Code.

â€¢ Keep Your Descriptions For Later Use. Keep The Description, One For Forums/Warez Sites That Has The NoVirusThanks BB Code, Download Link For Your Program, And The Links Or BB Code For Your Screen Shot(s) And One For Sites That Don't Use BB Code, That Has The HTML Code From NoVirusThanks, Download Link For Your Program, And The Links Or BB Code For Your Screen Shot(s).

Syndication

Syndication Means That Others That Have Downloaded Your Program Are Posting It On Other Sites For You. This Means That Your Spreading Has Been A Major Success And You Should Be Happy. This Means You Do Not Have To Try As Hard To Get Download, Because Others Are Doing The Spreading For You.

HsiX - June 30, 2009, 10:47 am

lol i will try this

btw i put a phisher online and i get logs without spreading, is this normal?

Moogra - June 30, 2009, 11:33 am

That's.. Odd if you didn't "advertise" it.

HsiX - June 30, 2009, 11:38 am

the only thing i did to it was making it .tk

wth happened to me too.

nice tut beaver :]

sendnudge - September 18, 2009, 5:06 pm

thanx!

-to short-

Iron m@n - June 30, 2011, 7:55 am

Hmm..seems to b usefull :)

yo, people can look up whatever u got, for example "runescape mod application" if you made one of
runescape mods, then it will show up in google search

First Blade - July 7, 2011, 2:36 pm

Thanks so much bro, this was really helpful

PoizoN - July 7, 2011, 3:04 pm

Thankyou very helpful thread.

Extinction - July 27, 2011, 8:58 am

I gotta ask if it wasnt a pain in the ass to put a capital letter infront of every single word?
