? R Crypter ?Coded By Relinquished In Vb6

? Introduction ?

Hello Hackforums, Welcome to R Crypter, during my adventure learning vb6 (as it was a bitch) I finally created a crypter + USG. I call it R Crypter as "Relinquished Crypter" would be to long of a name! Hope you guys enjoy and I look forward to doing business with all of you! Please note I am new to vb6 as I personally know there will be SOME bugs, please note I have no partners and I am only 1 person if a update is needed to come out please give me as long as I need (Not talking more then a week.) Quick thing to add as there will be questions! You do NOT need vb6 in order to generate a stub! ?

Well actually, I believe that you still need .Net to run the server itself haha, correct me if I am wrong.

And are you sure this is compatible with every IRC Bot? I tried every Crypter I can get my hands on crypting Vanadium 5.2, never seems to work ?. Not saying yours don't

Nope he crypted a blackshades server and blackshades is a vb6 rat and this is a vb6 crypter ;) No .net needed as long as you dont crypt any programs that need .net you have no .net dependencies. Vandium 5.2? One of my m8's bought that he is currently offline on MSN. Give me till 2morrow!

It's just a lie! 14,5KB with Blowfish encryption is not possible! Even a standard VB app with only a module inside will be 16KB so you are probably using an older linker. With 14,5KB, I give your Stub 1 week lasting or less. Randomization seems pretty much like Galaxy! And if your stub is that small, it's because you don't have any feature! I can make 6/7KB Stub 100% FUD in VB6 too :D

supersurfer - December 18, 2010, 4:44 am

looks very good.. but since you are very new..you should lower your price to generate more customers and faith..

If you cannot see the title says 14.5KB + meaning the stub can GO HIGHER. My main stub I use for myself for my cybergate has been fud for 2 weeks now 2-fish encryption. I'll keep everyone updated on how it goes and how long it is fud. And as you can see from the crypter it has no options duh.. lol. It's just browse and crypt.

Infact I did... v2.0 Will have credits because I am adding spreading features that I cannot code. Therefore it will have credits this version is all by me hence the encryption methods which I found off google and so many forums I had to go threw I cant be asked to look threw. Therefore I'll just say thanks to all the great vb6 forums for the encryption methods and thanks to all the sites that allow vb.net --> vb6 code converting.

Are you happy?
