iCrypt Private Version by eXero

I have been working on a private crypter that I could use to FUD my own files, and I want to show it off to HF. If fully un-detects files, and I am still working on the EOF function. I may come out with a public version, I do not know. I also may sell a private version if I can get everything working. What do you guys think?

GuNtRiX - December 18, 2010, 8:29 am

Nice simple gui, I'll look forward to seeing the public.

willbebacksoon - December 18, 2010, 8:30 am

Good Work With Gui, Simple But Attractive.

L_xgod pkerx_i - December 18, 2010, 8:36 am

Looks like another great release to be, Looking forward for this release.

doctors - December 18, 2010, 8:37 am

Nice Crypter .. the public version would be nice with an anti-n00b protection .. :)

Sin|orD - December 18, 2010, 8:41 am

Hope it works like a BAMMM ! Looking forward for the release :)

tristan6100 - December 18, 2010, 8:42 am

this is exactly what we need, a simple long lasting crypter that works. I strongly suggest you implenting a USG.

nirvana™ - December 18, 2010, 8:47 am

Looking forward to this. :)

eXero - December 18, 2010, 9:52 am

Thanks everyone. What exactly is a USG? I have never heard of that.

.Astro - December 18, 2010, 9:56 am

USG is a Unique Stub Generator. not much crypters have it, but it keeps the program FUD for a longer time cause it doesn't use the same stub over and over again.

aspirin - December 18, 2010, 9:59 am

The GUI is attractive but the font doesn't look nice on it.

I am looking forward to the public version, hope you release it soon.

eXero - December 18, 2010, 10:13 am

I am still not sure I want to release a public version.

K4RMAf - December 18, 2010, 10:44 am

guys here just saying 'nice gui' blabla only to get more posts.

Dude, the gui sucks a lot, the font and that ...

Try too use simple colores, don't use backgrounds like the one u used.

Good work for the crypter!

.Astro - December 18, 2010, 10:46 am

What you should do is make your own customer toolbar, and make it black. The toolbar is the one that has X and stuff on it.

Prince of Persia - December 18, 2010, 8:24 pm

Change the name of the crypter. iCrypt was a REALLY famous crypter.

replaced - December 18, 2010, 8:37 pm

USG would be a good idea :]

eXero - December 18, 2010, 8:37 pm

I have never heard of it.

PHPrior - December 18, 2010, 8:39 pm

Dude change that name , it makes it looks like your coping another crypter

dotNes - December 19, 2010, 6:18 am

Hoping to see the public version shortly

btw Crypt2Fud is a nice name..

eXero - December 19, 2010, 7:32 am

Crypt2FUD is a horrible name. It blows.
