Thread: [Any RATS that do not need port forwarding?](#)

volcomstone000095 - June 20, 2009, 3:08 pm

I am looking for a RAT that does not require port forwarding. I do not want Albertino's because i do not have 100\$ to spend. Please post a free one that someone has posted on the site.

I cannot remember the password to the router xD =\ . I will ask my dad, but until then, please tell me.

Reset the router ??????

Orthodoxy - June 20, 2009, 3:46 pm

I don't think there is one

Taserz - June 20, 2009, 4:21 pm

try admin admin

volcomstone000095 - June 20, 2009, 4:56 pm

(Jun 20, 2009 04:21 PM)Taserz Wrote: [\[CITE\]](#) try admin admin I tried all the possible combos...

ie... admin:(default password my dad uses), (Our SSID):admin, password:blank

Fragz - June 25, 2009, 9:07 am

Fuck man i have the same problem. I have a linksys WRT54G and every time it tell me to put 192.168.1.1 at the top i get the login page but it never works. Do i need to like put in the name of my network and WEP key for password? Or is this just becuae the router is hooked up to my computer? It is hooked up to my brothers but im on the network.

dale - June 25, 2009, 9:27 am

I didnt need to use any port forwarding for Poison Ivy might just be me :D lol:D worth a try :D (if u havent already)

cc2 - June 25, 2009, 9:36 am

Either YOU need to port-forward or your victim. It's sad but it's true :(

GoTTsProfeT - June 25, 2009, 6:21 pm

Not true.I have a RAT Called IRCBot, basically it adds all your victims into a chat room over IRC and lets you control them via typing. You can control them from anywhere in the world.

INullkidl - January 28, 2010, 9:44 pm

I dont have a link but i just recently read a thread by a user that found a work around using hamachi virtual lan. In fact if i remember correctly you dont need to set up a no-ip account too.

mgcsupport747 - February 20, 2010, 9:43 am

try admin and then password box empty

Agent340 - February 20, 2010, 9:49 am

Can you RAT effectively without a router?

I am fool - February 20, 2010, 11:23 am

Brute your CP panel.

hacker456 - January 3, 2016, 6:36 am

Then go with Botnets, they dont need any port forwarding.Besides you can control many zombie computers from your server(website).

scuba2409 - January 6, 2016, 7:05 am

wow a post since albertino's age, that's long time ago but was one of the best crypters

Vamp22 - January 6, 2016, 8:54 am

Just port forward with a VPN?

Nex+ - January 6, 2016, 1:03 pm

Debug Rat you dont need port forwarding, its stickied at the top of the RAT section

aGFjaw-- - January 6, 2016, 2:06 pm

Old rat like prorat works differently, but you need victim ip address each time to connect.

Root - January 6, 2016, 2:18 pm

There are RATs With no ports like PHP RATs.

Khamul - January 6, 2016, 3:30 pm

This is a 6 and a half year old thread....wow.

CONGRATULATIONS ON DIGGING UP A 6 YEAR OLD THREAD ?

???RSA - January 10, 2016, 2:55 am

Well first off I would suggest Mons rat (\$25)... I myself was looking for one that didn't need it that was free but there isn't. But if you don't wanna spend \$25 than just buy RA4W VPN For A simple \$2.50 ?

YunoLawliet - January 10, 2016, 3:06 am

There is no RA4W VPN 6 years ago, so yeah the TS wouldn't know that. LOL

Kappa-chan - January 10, 2016, 4:22 am

Thread got started on the 21-06-2009

Get a VPN. Its safer for you and you don't need to port forward on your router.

You need to have a static ip from your ISP to port forward keep that in mind

You've just awakened a ten year old thread. Historic!

Seventeen year old thread*

I wouldn't recommend using your home connection for it regardless, the rat needs an ip and port to connect back too, port forwarding is nice because it acts as a c2 in a way and if anyone ever looked at the malware and seen where it went back too it wouldn't go straight to you.
