Thread: [\[Sneak Preview\] Darkweb 5.0 \[Sneak Preview\]](#)

TheBlackMarket - December 24, 2010, 12:35 pm

Hello and welcome to my thread.

I will present my browser that I have been working on for a few months, my previous browser was: <https://hackforums.net/showthread.php?tid=313022>

I know that it looks almost the same as my last, but my last crashed due to a database error in the system, the browser and I could not hold on to fix it so I started over and thought a bit more forward.

Here are some pictures of it:

Main:

Spoiler [\(Click to View\)](#)

Cookie Viewer:

Spoiler [\(Click to View\)](#)

History Viewer:

Spoiler [\(Click to View\)](#)

Settings:

Spoiler [\(Click to View\)](#)

However, as the browser is not clear, I wanted to show how far I've come and what you think and maybe give me some help on how to make it better?

I write down what programs are in this right now (that works).

- # Cookie Viewer
- # History Viewer
- # Temporary Internet Files
- # Settings
- # Popup Blocker
- # Phishing Protection
- # Website Blocker
- # RSS Viewer

and there are many more, can not stand to write up all the time. The time is late.

I might upload it here on Hack Forums on many seem to like the browser and if I'm in this mood that I want / dryers post it.

if you like my thread so please write a thank you in the thread. If you do not like my thread so please do not hold on to write weird stuff then. write something that could help me that case to make the browser better!

For those of you who are wondering, will this be a security browser with a lot of security and stuff in,

it's just the beginning. I hope this will be a good browser when it is completed.

This was all from me now. Merry Christmas and Happy New Year Hack Forums!

FEL1X. - December 24, 2010, 12:37 pm

nice, you just edited ie7 clone ;D

gj anyway :)

merry christmas to you too :)

easytorrentz - December 24, 2010, 12:49 pm

Can't wait for the release!

Edited IE7? Are you dumb?

The Darkweb browser makes you capable to everything!

IE7 is nothing compare to this.

TheBlackMarket is a great programmer, making a web browser is hard work...

Anyhow, keep it up bro!

myttarn - December 24, 2010, 12:51 pm

Oh my gaash =) are you gonna give this out for free? =)

It's a fucking control out of the toolbox. It uses IE itself.

TheBlackMarket - December 24, 2010, 12:53 pm

Awesome, gonna bookmark this thread =p

When will you release it ? =)

Jinxyy - December 24, 2010, 1:03 pm

Looks real nice. Great job, really.

Ghostenigma - December 24, 2010, 1:03 pm

IE Clone?! Copy Pasted from youtube?! Anyway I like the GUI

TheBlackMarket - December 24, 2010, 1:05 pm

Dont really know mate =P, i have alot of work to do, this is just my free time work. Haha. Well... if everything goes good it will be released in some week maybe, gonna add some security system controls to it =) and fix some bugs in the database. Good that you like the webbrowser =).

I will maybe add a Downloader that supports: [www.#.de](#), [www.#.com](#), [www.youtube.com](#), [video.google.com](#), [soapbox.msn.com](#), Any standard download (FTP, HTTP).

Yeah, because IE has none of these features, right?

S!rk0 - December 24, 2010, 1:29 pm

Good but you just edited ie7 vb.net clone, make your webbrowser better if you want to have a nice and popular vb.net webbrowser ...

FEL1X. - December 24, 2010, 1:33 pm

hm? go check ie7 clone browser, same as this one, he just changed color and example page

Salad - December 24, 2010, 1:34 pm

TheBlackMarket!

Damn, I remember you working on your other browser months ago but it never was released and I was sad.

Good to see you back.

Kotei - December 24, 2010, 1:40 pm

It looks actually slightly like a decent web browser. I'm shocked that it isn't absolutely horrid. GJ!

DoMeStiiC - December 24, 2010, 1:41 pm

cant wait to see it dude...and thats a cool browser i see

Dionysos™ - December 24, 2010, 1:44 pm

Good job, but you should improve Design before releasing it ;)

Ingenuity - December 24, 2010, 1:49 pm

HE IS USING IE7 CLONE!!! what a nub... He just ripped Thomas Maxwell's code without any creds... Look at the fucken screenshot here:

Local Celeb - December 24, 2010, 3:37 pm

Are you using the WebBrowser control?

M0D3M - December 24, 2010, 3:50 pm

It is the IE7 Clone..I have experimented with the source before and it even has the same Icon in the Tab. Well anyway I'm not gonna sit here and criticize. I am making a Browser also that I call xBrowser, but is in BETA MODE so it will be low features. It will not be as Advanced as this Browser as mine is in Beta Mode and I am actually Coding this myself, and it will still have the IE Engine. Though in the next version of it after I release the BETA tomorrow. It will have the GeckoFX Engine and Proxy Support Etc. So watch out for Beta Tomorrow!

.BangsOnly - November 19, 2016, 11:29 pm

hi i havent read a single thing anyone said no offense because im here to just share my experience with such things and its not as good as people say.

people may say its good and thats their opinion and their lucky they stayed safe and ive admit ive used in the past cause i was curious and im a user myself i dont care if my IP is on HF and fed prolly have a wait to get it through HF or hack HF not saying its true but i may be compromised and i may be fucked up. I know I HAVE been scammed for my own mistakes but let that be a lesson cause if i got it to work good i may be in deep shit with the cops even tho im not afraid of them like i sound but im glad i havent got a knock on my dooor nowadays i think i may be lucky they didnt do me up cause im just a starter but i have made a decision to quit it and clean it all out and never use it again if you want stuff get it from trustworthy people on the streets or freinds. dont fuck with online shit its never a good idea you may get scammed if your slow like me, you may get product but it may not be what your expecing, selllers reviews can be fake not all sellers are legit or fake but from my expienced most scary part is you dont know if your being watched and you dont know how safe you actually are. all these methods of staying safe may actually be a setup but fed not saying im true about it but im saying what i think and my opinions and how i cant EVEN SLEEP AT NIGHT cause i made 2 purchases got scammed and im worried that i may be compromised again

the fact that im admiting this here may get me compromised because feds are strong and I BELIEVE they can find me just from this post since my IP is linked to HF

I love hf hf teaches me alot and i still use it all day to learn and get better with computers and such ect but stay away from online ordering stuff its dangerous game.
and youll have trouble sleeping if your a person like me.

not telling noone what they should do again its up to you but freindly reminder and sharing my story.

Period stay safe and play safe. spend some money on the streets if your a user if not then dont even bother learning about it.

not worth the trouble it may lead to

im lucky i havent been chosen by the fbi but anyday they may come for my mistake i made while ago and if it does it does but please at least think about my words even tho you think its bullshit. im not trying to stop noone from getting their fun or making money. But i cant even sleep.

Sorry man trying to share my expereince didnt think about that part i apologize.

These threads should be deleted in my opinion i already contacted admin about it hope i dont get banned and he buys my opinions regardless im trying to help.

Believe what you want

No offense made. I cant change believes but i can share mine.

really in a shitty mood to the point i didnt think before i acted.

*Edit please remove the same word i used in a rush to express myself. if you may i will pm you to remind you about it right now.

Thanks and i apologize again to all that was cause trouble by my rushed stupid actions.
