By buying the jar, do you also send the Java source with it? I'd probably want to tweak it to my liking.

PrestigeWorldwide - December 25, 2010, 9:44 pm

Hey, I'm a little interested in this. First a couple things I'd like to cover.

1. I already am very experienced in making fake sites (I used to phish a lot), so I'd like to get the 3rd option if possible. This brings me to my second point

2. As for the JDB, is it private? Or is this just a public exploit and you are charging because most people don't know how to set one up? You can PM me the answer to this if you think it may hurt your sales, I understand.

3. And lastly, if I purchase the 3rd option, will I get the source for the JDB, or just the compiled .jar?
