Free VPN for RATs (and more) with proXPN | No more Port-Forwarding
by beck030

This tutorial is a "Step-by-Step Guide" to install a free Virtual Private Network and how to use it with a No-IP.org DynDNS Host. Using this method, you dont need to be worried about Port-Forwarding anymore.

What you will need
proXPN Basic

A No-IP.org Account

No-IP.org Dynamic Update Client

Step 1 - Download and install proXPN Basic

- Get the proXPN client here: <http://proxpn.com/download.php>

- Select "proXPN Basic (bandwidth limited to 1,000 kbps)" and create a new account. You will need the account later on, so dont use a fake E-Mail.

- Download and start the installer. The proXPN installer will create a new network adapter which will be used for the Virtual Private Network.

- Start the proXPN client right after the setup is finished. Login with your account and click on "connect". This connects you to the Virtual Private Network. You will then have (at least) 2 IPs. The IP of your ISP and the VPN IP.

Spoiler ([Click to View](#))http://img227.imageshack.us/img227/4090/proxpn1.png[/img]

Step 2 - Create a No-IP.org Account and a DNS-host

You can skip this step if you already have a account and DNS-host at No-IP.org.

The VPN IP you get from proXPN is a dynamic IP so still need a dynamic DNS Service for your RAT-servers.

- Go here to create a No-IP.org account <http://www.no-ip.com/newUser.php>

- Then log in with your account and click on "Add a host".

- All you need to add a new DynDNS-host is a hostname and the VPN IP. You can name the host however you want.

Spoiler ([Click to View](#))

- To find out your VPN IP open your proXPN client. Your client has to be connected.

Spoiler ([Click to View](#))

- Now click on "Create Host" and you are done with this step.

Spoiler ([Click to View](#))

Step 3 - How to use the No-IP.org Dynamic Update Client with your VPN IP

As i already mentioned the VPN IP you get from proXPN is a dynamic IP. Dynamic means it keeps changing and needs to be updated at No-IP.org. The No-IP.org Dynamic Update Client does this automatically.

Download the No-IP.org Dynamic Update Client here: <https://www.no-ip.com/downloads.php>

- Download and run the installer. Then start the application and log in with your No-IP.org account. In the Hosts-list select the Host you just created and click on "save"

Spoiler ([Click to View](#))

- Now we have to make sure that No-IP.org updates the right IP. To do so open "File > Preferences". Go to network adapter dropdown-list and select the network adapter of your virtual private network. Then click on OK.

Spoiler ([Click to View](#))

The No-IP.org Dynamic Update Client will now automatically update the DynDNS-Host if your proXPN VPN IP changes. Check the "Troubleshooting / F.A.Q." section of this tutorial if your client wont update your VPN IP.

How to use the VPN IP with my RAT Servers

First of all you dont use the proXPN VPN IP, since it is dynamic and will change. You have to use a DynDNS-host. Most of you guys should already know that. I described how to create and use a DynDNS-host in steps 2 and 3 of this tutorial.

Since this tutorial explains how to use a proXPN VPN IP with a DynDNS service and not how to use a DynDNS with the RAT tool of your choice, i dont want to get too deep into the RAT-server setup thing. There are plenty of great tutorials for RAT-server setups around on HF.com.

One thing i want to mention is, that it should be no problem to relocate the IP of your DynDNS you used on your running RAT-servers to a proXPN VPN IP. Escpecially if you use a DynDNS by No-IP.org. In that case use your No-IP.org Dynamic Update Client like in step 3 of this tutorial.

Just dont forget that the proXPN VPN IP are not static but dynamic.

Do i really need no Port Forwarding? And why not?

No, you really dont need Port Forwarding. I already tested it.

The reason why this works without Port Forwarding is the way how the proXPN private virtual network works.

All traffic that is sent trough their VPN get encrypted. The incoming traffic uses SSL protocol which is port 443 and is decrypted by the proXPN Basic client.

For more informations on proXPN please visit their website: <http://www.proxpn.com/>

Troubleshooting / F.A.Q.

The No-IP.org Dynamic Update Client wont update the VPN IP?

-If you see something like this, something went wrong:

Spoiler ([Click to View](#))

[img]http://img210.imageshack.us/img210/6061/duc3.png[/img]

In that case make sure that ...

... you selected the right network adapter at "File > Preferences"

... your proXPN Basic client is connected.

If the No-IP.org Dynamic Update Client still wont update the VPN IP, reboot your system. Remember that the proXPN Basic setup created a new network adapter. This maybe causes some trouble.

Feel free to ask your questions in this thread or send me a pm.

indicud - December 26, 2010, 4:16 pm

I'm doing this when I get on my PC. thank you <3 nohomo

fizzefranz - December 26, 2010, 4:53 pm

AMAZING TURORIAL.

- Thanks alot mate. Very usefull for dummies like me :p

Cryptography - December 26, 2010, 5:22 pm

Sighs You want PROXpn people to knock on your door? This is not recommended if you want to get caught. They keep logs.

Yet I do use it for things, and I make an excuse it's just torrents since it's a very SMALL connection thing....

Just don't use it for big stuff like 100+ bots.

fidgit - December 30, 2010, 12:15 am

Thanks for this tutorial....splendid work!

M4x Soul - December 30, 2010, 12:20 am

This already got released by one of my friend on the forum... next time please use the search button...

Grimskulls - December 30, 2010, 12:33 am

I doubt people from PROxpn would come knocking on you're door. If you're that worried, find a VPN service on HF itself that users provide without logs. I'm currently using nVPN(dot net) and they help with port forwarding if needed. \$2/month isn't bad.

Sin|orD - December 30, 2010, 6:41 am

I will give it a try for sure ! :D

Zeon - December 30, 2010, 4:12 pm

So what port do we select when creating our RAT server? 443?

c_o_d_y - December 30, 2010, 4:22 pm

Okay for the many questions. I used this guide, and it was great! I can now RAT people. Fuck portforwarding. All you gotta do is set everything up and then you can listen in on any port you want to. I suggest 82 or 100 :P. Thanks for this guide!

loganmaster123 - December 30, 2010, 6:02 pm

If I check if my ports are open after I set this up, should they be open, or what? Because I just checked on canyouseeme, and it says the connection timed out.

modera - December 30, 2010, 7:12 pm

thanks for the posting bro..nice tutorial

milzgwaps - December 30, 2010, 7:32 pm

I've been using this 1 year ago ! :D cheers !

Happy New Year !

beck030 - December 30, 2010, 9:38 pm

(Dec 30, 2010 05:12 PM)Zeon Wrote: [\[CITE\]](#) So what port do we select when creating our RAT server? 443?basically it doesnt matter which port you use. just make sure that the port of your choice isnt already in use. 443 is not an option - it is used by the https protocol.

further you should use a port above the "well known ports" which are 0 through 1023. but that isnt really necessary. there are unassigned ports in that range too.

go here to find a list of used ports search for "unassigned":

<http://www.iana.org/assignments/port-numbers>

some examples:

914-988 Unassigned

1001-1009 Unassigned

(Dec 30, 2010 07:02 PM)loganmaster123 Wrote: [\[CITE\]](#) If I check if my ports are open after I set this up, should they be open, or what? Because I just checked on canyouseeme, and it says the connection timed out.yes the ports should be open. using this method you will need a active port listener to test it with canyouseeme.org. which RAT do you use and which port did you set as listening port on your RAT Server?

on cybergate go to "Control Center" > "Options" > "Select listening ports". make sure that you added the listening port of your RAT server under "Active ports" and that you have set the right connection password. after that go to "Control Center" > "START". now your cybergate client is now listening to the ports you added to the "Active ports" list.

try canyouseeme.org again. if you still get a connection timeout you should check if your no-ip.org DynDNS is set to your current VPN IP.

open a windows console and ping your no-ip.org DynDNS. example:

```
> ping yourname.no-ip.org
```

if the resolved ip is not your current VPN IP, you have to flush the windows DNS cache. run this command in a windows console:

```
> ipconfig /flushdns
```

after this it should work. if it doesnt, feel free to ask for help.

? ? ? - January 8, 2011, 5:49 pm

ive done it all correct, but i still get connection refused on canyouseeme.org, can anyone help please ?

iNk Jr. - January 8, 2011, 9:43 pm

Thanks for share broskii.

beck030 - January 9, 2011, 12:50 am

(Jan 8, 2011 06:49 PM)? ?+ ?? ? ??™ Wrote: [\[CITE\]](#) ive done it all correct, but i still get connection refused on canyouseeme.org, can anyone help please ?which ip do you see on canyouseeme.org? is it the ip you got from proxpn, a proxy ip or the ip of your provider? it must be the proxpn ip.

do you have an active port listener? make sure your RAT client is running and started.

Mortalis Piratica - January 9, 2011, 12:59 am

Thanks for the tutorial :)

Regards,
Dawood

umer24434 - January 9, 2011, 2:14 am

thanx for this amazing tutorial..

beck030 - January 9, 2011, 2:30 am

(Jan 9, 2011 03:14 AM)umer24434 Wrote: [\[CITE\]](#) thanx for this amazing tutorial..

i have a question...which port we should use???the ports between 1001 and 1009 are unassigned. you can use them.

please read this post too:

<https://hackforums.net/showthread.php?tid=927965&pid=8708499#pid8708499>

beck030 - January 9, 2011, 10:22 am

UPDATE 09.01.2011

recently i got the the error "incorrect user name or password" when i tried to connect with the vpn. i was worried about a ban after i made sure that i typed in the right user password. then i tried to login on proxpn.com and it worked.

so there seems to be a problem with their client authentication servers. maybe their servers are too busy at some times of the day and this causes the login error.

i kept clicking on connect and tada! after the 6th or 7th time i worked.

so if you you get the "incorrect user name or password" error, try to login on their website. if you can login there, it should work with their client too. just keep clicking on connect until it works.

?ami - January 9, 2011, 1:02 pm

ProXPN do not keep logs, I checked their website, and they say they do not keep logs of what you do on the internet, but they keep logs of when you connect and use there VPN for up to two weeks.

African Hat - January 15, 2011, 2:25 am

It updates itself but the ports just not opening?

beck030 - January 15, 2011, 2:55 am

(Jan 15, 2011 03:25 AM)Andrique Wrote: [\[CITE\]](#) It updates itself but the ports just not opening?
i will need more information to help you.

- you created a proxpn client and installed their client and can connect to the vpn?

- you installed the no-ip.org duc client and it updates the network interface used by the vpn?

- you tested the port forwarding on canyouseeme.org? which ip do you see on that site under "Your IP"? is it the ip from your ISP or the IP from the vpn? it must be the vpn ip.

- when you test the port forwarding on canyouseeme.org, make sure you have a active port listener running. if you use a rat like cybergate it must be started. alternatively, you can use a program like the port listener by RJL Software to listen to the port of your choice. google for rjl port listener to download it.

when canyouseeme.org says error, it doesnt necessarily mean that the port it closed. maybe there is just nothing listening to the port.

African Hat - January 15, 2011, 3:19 am

Everything is done you said, and when I listen to port and I try to infect myself it just doesn't work, help:D

beck030 - January 15, 2011, 3:32 am

(Jan 15, 2011 04:19 AM)Andrique Wrote: [\[CITE\]](#) Everything is done you said, and when I listen to port and I try to infect myself it just doesn't work, help:Dso your port forwarding is working now but you still cant infect yourself?

you really have to provide more information. i cant help you when you tell me "it doesnt work" you know?

- did you use the no-ip.org DNS when building your stealer/rat/whatever?
- what ip is resolved when you ping your no-ip.org DNS? it must be your vpn ip.

jeave - January 15, 2011, 3:41 am

- 1.)Installed ProXPN
 - 2.)Run it
 - 3.)Set the preferences in no-ip
 - 4.)No-ip cant update
 - 5.)Firefox cant connect
- What do im wrong???

beck030 - January 15, 2011, 3:55 am

- (Jan 15, 2011 04:41 AM)jeave Wrote: [\[CITE\]](#) 1.)Installed ProXPN

 - 3.)Set the preferences in no-ip
 - 4.)No-ip cant update
 - 5.)Firefox cant connect
- What do im wrong???so proxpn got installed and is working properly?

does firefox work when you disconnect from proxpn?

i got similar problems with windows xp. deactivating and activating the network interface which is used by proxpn fixed that problem for me.

to restart the right network interface you first have to find out which network interface is used by proxpn. open a console and type in "ipconfig /all". look for the interface using the proXPN ip. this is the interface you will need to restart. then go to "system control > network and internet connections > network connections". right click on the interface, then deactive and activate it.

jeave - January 15, 2011, 4:23 am

I have windows 7 so i dont know where network and internet connection is,can you help me over teamviewer?
plz beck,help meee

KennySmoothx - January 24, 2011, 4:16 pm

This worked!! Awesome thanks bro :D!

martincito - January 25, 2011, 9:48 pm

when i connect to the VPN i cant connect to Hack forums but it does connect to internet.
when i disconnect from VPN i can connect to Hack forums.
What did i do wrong

NeoAngel - January 27, 2011, 9:54 am

What did i do wrong

Thats because HF blocks common VPNs, you wont be able to access HF using the common ones.

RAT / Hackforums u have to keep switching between them

jeave - January 27, 2011, 10:07 am

So,when im connected to PROxpn i cant connect to hackforums???

beck30 can you help me???

always have the same prob,when im connected to proxpn i cant update noip

NeoAngel - January 27, 2011, 10:17 am

(Jan 27, 2011 11:07 AM)jeave Wrote: [\[CITE\]](#) So,when im connected to PROxpn i cant connect to hackforums???

Yes, you need to disconnect from proxpn if you want to open HF

uuuuuuyyyyyzzzzz - February 8, 2011, 8:12 pm

gonna have to try this proXPN option ;)

since i am having trouble with portforwarding coz its showing my default gateway as 0.0.0.0 :P

btw thanks for the tutorial :)

Junkie™ - February 8, 2011, 8:48 pm

Is there another one similar to this that HF does not block?

supperelias - February 16, 2011, 7:27 am

thanks, this Guide was very helpful to me, since my router doesnt support port forwarding...

one tip for the Setting up a Rat; make sure your RAT server uses the same port that you listen to!

savvymatthew - February 19, 2011, 1:18 pm

that's for the tut... ill have to see if it works

Hack1 - February 19, 2011, 8:58 pm

but will it be fast or will it slow it down?

ROCKST?R - February 19, 2011, 10:44 pm

Whats the port for the RAT(s).

Evader - March 14, 2011, 1:30 pm

Thank you so much dude, my ports wouldn't open and now they are.

- Hexpro

indyriders500k - March 17, 2011, 10:59 am

will this setup work wirelessly thats the only problem im havin right now its only workin on my desktop not my laptop if ne1 can help it would be greatly appreciated

mamado - March 18, 2011, 4:50 am

Nice man works 100% ? ?

Daveyjones - March 21, 2011, 9:10 pm

Hello beck030

this is a very good tutorial thanks , but i still have a question,

my english is bad, but i hope you can understand, :)

I opened proxpn and No-Ip Duc and started to setup my RAT ok .. builded the server and crypted it ..

when i test it on myself i connect to the network perfect & can view myself and everything..just everything worked perfect

then i tried to test it on my brothers computer, but he didn't connect to my RAT..

maybe you can help with that? do you think i did something wrong with proxpn and duc? because it worked on my computer so well :s

RAT i use = Blackshades

Crypter i use = Ownz Crypte

regards, and sorry again for english , if you don't understand anything , let me know and i try to explain better

James. - March 21, 2011, 9:35 pm

If it worked on your own computer then it works.

Either your brother's A/V is catching it or something went wrong, but it won't only ork on your computer

`Mafia - March 21, 2011, 11:48 pm

Don't know about you guys but while using ProXPN do some of your keylogs come out encrypted?

Random sections of a log will come up all encrypted for me, like the client failed to decrypt the information. Only see this while I'm using ProXPN.

The New Santa - March 30, 2011, 8:09 pm

Thanks so much! This was really helpful!

Prosperity - March 30, 2011, 9:33 pm

Thanks for this, I can't port forward so this will help me a lot, maybe I can finally give RAtIng a go.

-Prosperity

?Sean - March 31, 2011, 11:20 am

Amazing tut, thanks for this!

iggy - April 3, 2011, 11:45 pm

when I try to install proXPN....during the installation i get a message "an error occurred installing the TAP device driver" and when i try to connect to proXPN "connecting to proXPN has failed". Im using windows 7 home premium 64bit. PLEASE HELP

rappa - May 9, 2011, 4:32 am

ok so it worked and connected to the port with my no ip and then i turned off the vpn and it still connects to the port so i dont need to use the vpn anymore?

RussianFederation - May 9, 2011, 6:49 am

Good tutorial thank you bro.

rotciv15 - May 25, 2011, 12:02 am

haha last picture FAIL, you erase your ip and ip is down again.

thanks a lot now my rat is working good :)

cspear - May 25, 2011, 3:05 am

woow, my friend was using t.v like 20mins ago tryin to download this for me sinse my router sucks. But one problem i need help with -_- . He is from new zealand and was abl to make an acc although u need to have an american i.p. Im in australia and im wondering how do i do the same? pm pls?

ezustkorso - May 27, 2011, 4:55 am

I try this, but i cant see victim.

I see myself, but victim no.

Set up proXPN, no-ip.biz reg and software.

but noothing. :'(

Reaping - May 27, 2011, 5:26 am

When I'm on proXPN my internet is really slow. Am I the only one experiencing this?

SIM-701256 - May 27, 2011, 6:35 am
