GIMP - How to create a glow - Images

1) In this tutorial I will teach you how to make a blur for any render or image. In this example I will be using a text layer.

Spoiler [\(Click to View\)](#)

2) Duplicate your layer three times

Spoiler [\(Click to View\)](#)

3) Move the three duplicated bellow the original layer

Spoiler [\(Click to View\)](#)

4) Now change the colour of the duplicated layers to the colour you want the blur to be, you can do this using colourise.

Spoiler [\(Click to View\)](#)

5) Now go to "Filters", "Blur" & then "Gaussian Blur"

Spoiler [\(Click to View\)](#)

6) Select 5.0 x 5.0 for the first duplicate, 10.0 x 10.0 for the second duplicate and for the final duplicate select 15.0 x 15.0

Spoiler [\(Click to View\)](#)

7) This is what the blur will look like without the original layer

Spoiler [\(Click to View\)](#)

8) This is what my final product looked like

Spoiler [\(Click to View\)](#)

Thanks, it is pretty simple yet effective ?

H??????a X™ - January 12, 2011, 2:18 am

Used it and it works well, thanks. :)

Mind Glowing - January 16, 2011, 12:28 pm

1 click in photoshop rofl

Soulcal - January 16, 2011, 12:36 pm

My tutorial is is 8 steps so that people understand how to use, but it literally takes me less than 15

secs ?

Lol the outcome is the same, though you can change to distance and so on in photoshop :P

So I dunno why you dislike? :P

Too easy for you? xD

The layout of photoshop is completely different to GIMP's and the wording is, so it was pretty complicated ?

rfrsrfrs - January 17, 2011, 5:30 pm

nice tut

ill try it out soon =]
