Thread: [*****COMPLICATED:Reset the script: SOMETHING TELLS ME THATS NOT CORRECT TERM*****](#)

musicman7p - June 25, 2009, 7:16 am

There is a website(worldstarhiphop.com) that I visit daily. Long story short its a video blog of the news around the world.

When you view the video you can stream/play it back (the first time) You would see a black line where the streaming is taking place under the video.

However it goes away, if you reload the page or view another video. The black line(stream) comes back every ten minutes or so.

How do you set it(I dont know if its something with the internet settings or if its the script itself) so that the video will stream everytime a video plays.

If you have no idea what Im talking about. [click here](#) and observe where the playback black line is(but you will only see it the first time) streaming from right under the video.

Then reload the page(hit the refresh button) and observe how the line(stream) disappears

Isnt there someway you can change it so that the stream will always be there(BTW What is the correct term for the problem I am describing?)

But I didn't bump it every 2 hours. I just bump it when the thread starts to die and go on the second page(of this forum)

What happens if you refresh it with Ctrl-F5?
Maybe look at your cookies and see if one is set that expires after 10 minutes?
clear your cache?

How would you go about doing that

ZedNull - June 30, 2009, 8:23 pm
If you're using firefox, try Edit->Preferences->Privacy-|click on Show Cookies
you can browse this dialog to the site, then look at what cookies they've left.

I'm not sure about IE, if you're using it. If so, perhaps someone else knows?

Ok I think Im getting somewhere. I deleted all of the temporary files in the browsing history(cookies and such)

and when I refreshed the page I did see the stream. But when I refreshed the again, the stream disappeared. So its probably a cookie(or something to that nature)

So how would I set it so that this website does not add any cookies(so that I can always see the stream for the videos).

ZedNull - July 1, 2009, 9:34 am

What happens if you disable cookies? There should be a checkbox to uncheck on the same preferences page. Sometimes the page won't load without cookies though, so it's hit or miss.

But if I click disable cookies wouldnt that disable all cookies to the websites I visit(Such as hackforums)

ZedNull - July 1, 2009, 11:39 am

Temporarily, yes... I haven't found a quick way to specifically block only one sites cookies yet.

Anyone else here know?

Probably n3xus knows a solution. He knows a lot about cookies and stuff like this

n3xus Could you shed some light on this problem that I am having here.

THX???

musicman7p - July 2, 2009, 3:33 pm

n3xus

is there a way to reject a cookie

If you're on firefox, check out <https://addons.mozilla.org/en-US/firefox/addon/2497>
IE, maybe <http://www.mvps.org/winhelp2002/cookies.htm> ?
