ShockLabs - December 31, 2010, 11:26 pm

F-BOMB VERSION 2.0

That's right folks. It's finally here. F-BOMB! Version 2.0. Before we delve into the details, how about some pictures of this baby?

[img]http://img18.imageshack.us/img18/964/47976966.png[/img]

[img]http://img696.imageshack.us/img696/7401/12882157.png[/img]

Now that we've seen it, let's read up on it eh?!

Orgasmic black&orange GUI, courtesy of Lewzor!

Uses our custom SMTP Server so no need for credentials! Leave it all up to us and just start bombing!

Can send both SMS and MMS at the same time! Put as many different messages as you want!

Provider lookup! Don't know the provider? Our easy lookup tool will find it for you!

Enter ANY PROVIDER you want! Not limited to any set providers!

Due to the above, it works in ANY country with SMS gateways!

Super detailed log of every event that happens, when it happens!

Log of texts sent the session, progressbar to show you how everything's going, and many extra details that are nice to have!

Minimize while bombing and simply watch the progress from your taskbar!

Our own bought dedi = no downtimes!

HOW DO I GET IT?!

Here's the gist folks:\$15 includes lifetime updates! I mean look at it. This is only our second version. Imagine version 3 or 4!

If you aren't satisfied, we'll give you your money back! Just tell us within a week of purchasing!

If you wanna try it before you buy it, PM me or Lewzor for a free 24 hour demo!

Teamviewer support offered! Having problems? Add shockwave@fbi.gov or lewzor@hotmail.com to your MSN and we'll give you remote assistance free of charge! L-S aim's to please!

We're extremely proud to offer our best work yet to all of you at HackForums. Let us know what you think guys!

Happy new years,

Shock & Lewzor ?

This should be posted In the Marketplace Seller section.

In my opinion, It's a little too expensive.

Well I figured considering we sold version 1 for 10 bucks and it sold fine, considering the HUGE difference between 1 and 2, I thought buyers would understand the additional 10 bucks for the extra benefits.

DigiDeveloper - January 1, 2011, 12:34 pm

Yeah lighting up people's phone's with multi picture bomb's iz ultra fun :D Talk about overload..

LMFAO +epic win :D

ShockLabs - January 1, 2011, 3:25 pm

Also, we're currently adding an option to schedule a bombing at a specific time, so if you know you're going to be with someone at say 4pm, you can set it to go off then to enjoy the laughs in person!

Doja - January 1, 2011, 3:51 pm

I like it but I do have some questions

Why do need servers? Do you have a proxy or is it like a licensing system? Or does the program communicate with the server which has built in emails that send the sms or mms?

DO NOT WASTE YOUR MONEY.. because google has strict spam protection and you wont get past it ever. sms bombers that do not use gmail accounts are in need.
