How To Upload A Server On Torrent Site Without Getting Your File Deleted Or Getting Banned

Howdy, My Name Is Dawood Khan. Today I Am Going To Teach You How To Upload To A Torrent Site Without Getting Your File Deleted Or Without Getting Banned From That Site. It Took Me An Hour To Write Think And Correct Spelling Mistake But If Still There Is Any Spell Mistake To Wrong Pronunciation Please Forgive Me This Was My First Guide, Now Lets Start. Well Most Of The Torrent Site Checks File For Validation After It Is A Nice Working And Clean File They Accepts It And Your File Appears On That Site. Most Of You Upload To A Torrent Site Without Binding Your Server File Or Making It FUD & When The Torrent Validates That File They Realize That It Is Some Kind Of Virus With Approving It Deleting That File They Ban You From Thier Site. So Today I Am Going To Teach A Small Method Without Getting Your File Deleted And Wlthout Getting Ban From That Site So Here We.

First Of All Make Sure Your Server Setting Are Properly Working And Never Choose A Fake Message When You Are About To Bind That File & Please Note Never Bind That Server With Any File When You Are Making A Server Before Crypting It.

Second Is Make Sure That Your Crypter Work Fine After Making Your Server Also Make A Test Server And Crypt That File With The Crypter That You Are Going To Crypt Your Original Server With, Now Run That Test Server Which Is Crypted With Your Crypted And Mkae Sure You Have Port Forwarded 81 When Running That Test Server On Your Computer If You Get Your Computer Victim On Your Rat It Means That The Crypter Is Working And Is Good.

Third Is Make Sure Your Crypter Is Stable Or If The Crypter Is Public And Used My Many User's You Will Never Get 1000+ Victims Even 500 Victims Because Public Crypter Sucks Always Use Private Crypter Because Public Crypter Are 10% Stable Then Private Crypter And There Is A Chance That Some Time Your Server Might Be Crashed Or Someone Idiot Scans It On Virus Total And Get Your Server Detected And Your File From Torrent Will Be Deleted And You Will Get Banned.

Fourth Is To Make Sure Your Crypted Is FUD And Your Crypter Is Updated Everyday & Also You Must Binned Your Server With An Applicaiton Which Is Not Detected And Working Good, This Way They Will Never Detect Your File.

Fifth Is To Make Sure You Give Summary To That Server When You Crypt It Like Company, Product, Copyright etc This Way Your Crypter Will Gain Full Trust By The User And The Torrent Site Maybe They Will Feature Your Torrent And You Will Be Able To Get Mass Victims In A Day Or In An Hour. Make Sure Your Crypter Has Trusted Company Summary Like Microsoft Or Any Other Good Hacking Programer Or Develpoers Site Don't Give Your Own Shit Site Summary. Sometimes When You Give Microsoft Company Summary To Hacking Program Binded With Your Server It Is Detected Not By Anties But Using Common Sense They Deletes That File Without Running It But This Happens Very Little So Don't Be Worried.

Sixth Is To Give Proper Description To Your Server Like Something Good About It How It Works, When Was It Develpoed, And Blah Blah Blah This Way Your Torrent Or Server Will Get More

Trusted And Wollaa You'll Get More Victims.

Seventh Is To Make Sure Your Server Is Binded Properly With Your Server Run It In Virtual Machine To Check Weather Your That Binded File Appears Or Not If It Fails To Appear Then It Means That Your File Is Not Binded With Server Properly Or There Is Some Kind Of Error Is Your Crypter But Only Public Crypters Have This Kind Of Errors But Only Sometime.

Eighth Is To Give Proper Torrent Trackers If Your Torrent Trackers Are Slow And Some Are Not Working By Mass Download Of That Torrent Can Crash All Of The Torrent And You Will Get Only Some Victims.

Nineth Is To Give Proper Description, Name, Category To Your Torrent File When Uploading To Torrent Server This Way There Is Less Chances That Your File Will Be Deleted Even When Its Not Binded With Any File But Don't Think This Way They Will Not Catch You There Is A Chance That Some One Reports Your Torrent And Your Torrent Will Be Deleted.

Tenth Is To Ask Your Friends To Give Good Comments When The Torrent Is Uploaded Say Something Like That Its Awesome, Its Epic, It Worked For Me 100%, Best File Ever Uploaded On Torrent Site, This Is A Clean And Working File Thanks For The Torrent etc, This You Will Get Your Torrent More Trustable And You Will Get Alot Of Victims & Here It Ends You Get 200-300 Victims Everyday And Make Upto 10000 Victims Per Month Or Even It Can Be Made With In 1 Week.

Note: Never Upload Your Server When Its Not FUD, When The Crypter Is Not Stable, Without Proper Checking Your Server By A Test Server Crypted, When Its Not Binded, When It Has No Summary. Please Take This Note By Heart If You Read All Of The Above And Do As Fallow I Promise You Will Get 1000+ Victims Easily.

Thank You For Reading My Guide On How To Upload A Server On Torrent Site Without Getting Your File Deleted Or Getting Banned From That Site. This Is An Epic And 100% Working Guide. Dawood (Unknown) Is The Official Author And Writter Of This Guide And Please Don't Try To Rip It Or Leach It. Thanks Will Be Appreciated :).

LOL That's Just Wow No Comment Hmm...

mayank_predator - January 3, 2011, 12:17 am

I appreciate your efforts bro and thanks for the tutorial.

Numinous - January 3, 2011, 12:18 am

good method..:)

thnx..

Hydrogen - January 3, 2011, 12:55 am

Looks like a good tutorial, but I can't Stand Reading It When You Write Like This.

abdulthegreat - January 3, 2011, 12:55 am

omg don't capitalize every first letter.

Mortalis Piratica - January 3, 2011, 12:58 am

? So Sorry I Can't Re Edit It This Took Me Ages To Write.?

aspirin - January 3, 2011, 4:58 am

Nice tutorial.

IMO the fifth, sixth and eighth steps are quite same and yeah, I agree that the writing style makes it difficult to read.
