Thread: [how to shutdown, restart or log-off other computers in a network using cmd!!](#)

Moscow - June 27, 2009, 3:07 am

this is ideal for teenagers in school---- ? (NETWORK and INTERNET REQUIRED!!! ?)

click on the 'start' button

then click on 'run'

and then, type in 'cmd'

this leads you to the command prompt which allows you to get certain things done by writing down commands!

type in "net view"---this allows the user to view all the computers connected to the network! let's take 'AbC' as the name of a pc.....ok!

then, type in "tracert AbC"-----this gives u the IP address of the computer named "AbC"?

then, all u need to do is, type in "shutdown -i" (note: there is a gap between the shutdown and the -i)---this opens up a window showing the shutdown prompt!!?

there, on the first small space, click on the button saying- "ADD"----this opens up another small window where u enter the IP address of the victim (e.g AbC). The IP address is like . . .

then you choose what u want to do--how long u want the "shutdown" window" to be there on the victim's PC, whether u want the victim to be warned, whether you want the process to be planned, whether you want the victim's PC to restart, shutdown or log-off...u may even leave them a msg if u want to(optional)!?

and then, click on the "OK" button...this allows you to give the command and as soon as you do so, the victim's computer performs the task you wanted and there you have it!!!???

[/font][b]ENJOY!!!

lol, everyone knows this. But like sum1 else said at least your writing tuts.

1337.HDLA - June 27, 2009, 11:53 pm

nice for copying and pasting. who's the creator? give him a credit.

CruZR - June 28, 2009, 1:30 am

I've done this many times, it is decent fun afetr finishing a CA homework assignment.

give him a credit.

i did it myself using my techniques.....i didn't copy this from any place ok?
and if u think u i'm lying, be it---I don't care-

haxrpro - June 28, 2009, 4:26 am

well done man...i liked it ?

ZeTeX - June 28, 2009, 8:39 am

nice i like that tnx!!

give him a credit.why would someone copy this? Don't accuse someone unless you are sure.

hackerboy2112 - June 28, 2009, 10:24 pm

im behind a router and it doesnt come up with ips it comes up with a number for example like this
10.1.1.7 ? do i use the instead the ip

brunolez - June 29, 2009, 12:22 am

I will tell you something.....(i am refering to the guy who posted this) you may become the greatest hacker of recent times. do not worry about what other hackers say... like "i have done this a million times before" go ahaed and post what you think is going to be useful to anyone. I for example have done alot of hacvking and exploits but guess what.... i never knew ablout this...really!!!

as a word of advice to you (i can see you are new) hacking is not a game, it is a culture, a desire to always be informed. And for all those 'hackers' who can do nothing but criticise others i can tell you this : No matter how small the drop of water maybe.... it can make a river.

SilentExplizit - June 29, 2009, 4:22 am

this would only be good for school too bad its summer?

GhostBuster1 - August 22, 2011, 10:35 am

haha great.

like it really much:)

quite funny in school:p

Alterations - June 24, 2013, 10:27 am

Saying Access is denied... y is that!?

Sajuuk - June 24, 2013, 11:16 am

And for all those 'hackers' who can do nothing but criticise others i can tell you this : No matter how small the drop of water maybe.... it can make a river.It was a good script But who knows if he copied and pasted you will never know only he will know the truth if he tells some one then they will know and if he docent who know?

pawan_123 - April 24, 2017, 10:01 pm

hey its not working saying access denied please help

Donutman - April 28, 2017, 7:51 am

It said access is denied. Is there any solution to fix this problem?
