laduerb22 - January 7, 2011, 7:25 pm

I'm crypting all servers fud free. Just pm me your server and post in this thread. If I don't seem trusted enough, you can always team view me as I crypt it for you. Make sure your server is on a direct download site such as mediafire.

fujimoto - January 7, 2011, 7:29 pm

(REMOVED MY SERVER)

Thank you very much :)

laduerb22 - January 7, 2011, 7:32 pm

You cannot post infected files in the forum. I will still crypt it but for future reference, don't do it again.

Sorry about that, but thanks for crypting it. It did work well, and tried to see if it wouldnt work on reboot, but it did :P So Thanks!

laduerb22 - January 7, 2011, 9:25 pm

Bump

Still crypting servers free.

pushl %ebp - January 7, 2011, 9:27 pm

What is your crypter coded in? Does it require dependencies?

kittumanu - January 7, 2011, 9:42 pm

I understand that crypted server will be undetected by the antivirus. Does crypting a server also means that when the server is executed, it will go undetected by the antivirus and firewall ?

Evil Bob - January 8, 2011, 12:40 am

Pmed.

Characters too short.

LF is #1 - January 8, 2011, 1:01 am

he crypted my server, its 0/16, yet when i run it i dont pop up in my rat, so im wondering if he either gave me wrong download or ratted me.

laduerb22 - January 8, 2011, 1:18 am

I definitely didn't rat you. I even just showed you over team viewer. Many people will vouch for me. I think that your server may have been corrupt to start with. Just post back when you get your server fixed. If people still need servers crypted, I am still crypting them for free.

splintercell44 - January 8, 2011, 2:29 am

I sent you a pm, I have found that no .net dependency crypting tends to connect more often then

others. hope its no .net and thanks for the service :)

Carb0n F1ber - January 8, 2011, 6:51 am

My crypter is currently offline, would you mind crypting a quick one for me ??

BTW, does it need .NET dependencies ??

Sent you my server! I hope this will work!

laduerb22 - January 8, 2011, 1:44 pm

The servers I crypt do work upon reboot. Also, it crypts just about anything. It is still currently [0/16] or FUD, however you want to call it. If you still want me to crypt your files I will continue my service.

Another note is to send a DIRECT link in a PRIVATE MESSAGE. When sending the file, make sure it is your server.exe and not a .rar file. Sorry to be picky like that but it makes things difficult for me when I have to extract a million folders.

LouLaVie - January 8, 2011, 1:50 pm

I sent you my server. You need to know it's a Dark Comet server, they are harder to crypt without it going corrupted.

Thanks, I MOD I.

do i need to set up a startup method, or is your crypter doing this ?

does your crypter support EOF or RES ? (too know what server i need to build in darkcomet)

I believe I did crypt your server. If not, please send again. I have been deleting many pms from my inbox due to it getting full so I may have deleted yours without crypting it for you. If this is the case then just send it to me and I will get it crypted for you. As for everyone else, I am still crypting FUD servers for pretty much executable file. Just send it my way and you won't be disappointed.

If you go read the topic about your "Crypter" (Trololol Crypter) then you would know it is not FUD crypting. Nice try. Sorry For downing on ya. But I won't stand for fake services OR unworking services... Not saying you are trying to infect others. Just be careful guys.

Hi, I'm posting this in recognition of the many private messages I have recently received regarding hackforums members requesting that I crypt their servers. I have not and do not plan on continuing this service for members until further notice. I would appreciate if I didn't receive any additional messages until I authorize otherwise. Thank you.
