Thread: [\[HD\] SQLi and DEFACEMENT \(scratch to DEFACE\) video tut](#)

raahul2008 - June 30, 2009, 1:16 am

hi guys i made a tut on SQL INJECTION in that i explained everything from start to defacement.. but some guys were having problems with doing it..so i did a video tut about the whole "website defacing" process....

this video is in HD and it explains from the beginning to the final defacement..

download it and view... it is in mp4 format.... vlc player will play it for sure..

note: the site i use here was already injected... but i am using this site coz i know that it will give the password without hashes... so i can show you the defacing part..

and pls spend a second to comment and rate this thread...

the video tut:

Code http://#.com/files/250217567/SQLi_and_Defacement__by_RAAHUL_.mp4for more info see the text tut.

the text tut:

Code <https://hackforums.net/showthread.php?tid=93224>

if you have any problem post it here...

thank you guys ?

This happens to me when I am in college and its because I'm in a Local Area Network and being in a LAN means that rapid share sees you as one IP. So if some other douche is using rapid share, that means you are also using rapid share....

That you couldn't downloud the File has two reasons.....Your is used by more Users or you have an Trojan which use you as proxy.....

Awesome tutorial! I got some problems performing SQL injection though. On some sites, say for instance
<http://www.thegreennews.net/show.php?media=poetry&id=2009-01-21%2013:24:07%27> I get an SQL injection error, however when I try to order the columns I get no errors. Not even at order by 1--

What's wrong?

if you have any problem post it here...

thank you guys ?

Hello raahul2008,

Thanks for the tutorial!

Your video tutorial helped me a lot. Also, and the other member tutorial which explains the same thing of this forum.

Okay now, I followed all the steps exactly as in your tutorial.

First, I found a vulnerable site.

2. I found the number of columns, he has 46 in total.
3. I found vulnerable columns, and I used one of them.
4. I found the SQL version, which is higher than 5. "5.0.45-community-log"

And so I went with all the steps till the end..

But finally, I discovered the 3 user admins that looks like:
woulter:f58aac3993c32b142ef349dc89fa096d

The "woulter" it should be the username.

But now, I do not know what is behind this code: "f58aac3993c32b142ef349dc89fa096" if it was one of the user admin password, this should work. But apparently it does not work.

Or this It is a code that must be decoded?

Thanks again for your tutorial! and I expect a comment from you about the work which I talked here.

Sincerely,

HackCam

Yes you must decode the hash and the decoded hash must be entered as password for username "woulter"

Nice tutorial Thanks. I like it.But what is Shell?

hackpax - January 2, 2015, 6:06 pm

yeah, i kinda need a tutor to teach me the basics of defacing. money will be given to the individual who can teach me this.

i dont pay upfront though, i will pay after each lesson. we will together work out the details.

looking forward to get your PM.
