Thumbs up Enabling right click on sites that disable it

Lots of web sites have disabled the right click function of the mouse button... it's really, really annoying. This is done so that you don't steal (via right-click->save picture) their photos or images or any other goodies. Unfortunately, it disables ALL right-click functionality: copy, paste, open in new window.

* INTERNET EXPLORER

It's easy to change, assuming your using IE 6:

Click "Tools"->"Internet Options"

Click the "Security" tab

Click "Custom Level"

Scroll down to the "Scripting" section

Set "Active Scripting" to "disable"

Click "Ok" a couple of times.

You'll probably want to turn this back to "enable" when your done... 'cause generally the javascript enhances a website.

Mozilla Firefox

1. Go to Tools tools> Options and select Web Options from the left panel.
2. You would see that Enable Javascript is checked by default. Uncheck it and click OK.
3. Right Clicking should now be enabled on websites that do not allow it.
4. If this does not work, you could disable java altogether from the check box in the same window.

Opera

1. Go to ->Tools>Preferences and select the Advanced"Tab.
2. From the left panel, select "Content"
3. You would see that Enable Javascript is checked by default.Uncheck it and click OK.
4. Right Clicking should now be enabled on websites that do not allow it.
5. If this does not work, you could disable java altogether
