hack_addicted.pt - January 10, 2011, 6:00 pm

?hack_addicted.pt SQLi Scanner ?

--Status:[online (NEVER down again)]--

I HIGHLY recommend you to use this SQLi Scanner, and not .exe tools!

Side Note: Better dork = more results! Keep that in mind!

Note: This scanner is coded by r3m1ck, a very famous Indonesian Coder, i just modded it and uploaded it.

Auxilium - January 11, 2011, 2:04 pm

I have been trying to let the scanner scan specific websites, but with no success.
Maybe it would be a great addition to add this feature?

I can't as it uses a shearch in google to do the scanning.

What you can do is scanning with a dork that specific more the shearch like:

inurl:php?id=gov
(it will shearch more for .gov websites)

inurl:php?id=bank+credict+money
(it will shearch more for bank and finalcial websites)

Just add main words from the type of sites you want, like doing a google shearch. ?

You can also change the parameter like:

inurl:php?page=sex+girl+porn

or

inurl:php?=type+security+research

The more you change the more diversity of vuln sites you get.

And of course the more you search the more vulns you get also. ?

myk the warri0r - January 13, 2011, 12:21 am

Thanks buddy for sharing this.

03storic - January 13, 2011, 5:55 am

I like using something like this.

Code inurl:php?id=+site:co.uk+pur

Just change the three letters at the end to just about anything and you get vulnerable sites.

The member 03storic actually found how to do it:

(Jan 13, 2011 06:55 AM)03storic Wrote: [\[CITE\]](#) I like using something like this.

Code inurl:php?id=+site:co.uk+pur

Just change the three letters at the end to just about anything and you get vulnerable sites.

Just use it like this:

inurl:php?id=+site:[domain of website]

you can either change it like:

inurl:php?page=+site:[domain of website]

inurl:php?type=+site:[domain of website]

Example:

If you want to scan: www.thurrock.gov.uk

use: inurl:php?=id+site:thurrock.gov.uk

results:

Code <http://www.thurrock.gov.uk/libraries/libinfo/content.php?id='9&page='library> <== Not access !

You need to make your own, take ones that have already been made and modify them.

Start with:

Code inurl:product_detail.php?id=

Modified:

Code inurl:prod_detail.php?id=

inurl:productdetail.php?id=

inurl:product_detail.php?*=

inurl:product*.php?*=

inurl:*detail.php?*=

Thats about took all of 2 minutes to make up. Also you could try taking random words and try something like.

Code inurl:computer.php?id=
