Thread: [Creating a script that creates scripts??](#)

The Penguin - January 14, 2011, 11:57 pm

Hello everyone.

Im trying to make a little script that creates a script in a different directory.

Heres what im trying to do :

PHP Code

```
<?php
$File = "text.txt";
$Handle = fopen($File, 'w');
?>

<?php
$content = "<?

$fh = fopen( 'log.txt', 'w' );
fclose($fh);

$red = $_SERVER['REQUEST_URI'];

$file = "log.txt";

$hostname = $_SERVER['HTTP_HOST'];

$Browser = $_SERVER['HTTP_USER_AGENT'];

$ip = $_SERVER['REMOTE_ADDR'];

$today = date("F j, Y, g:i a");

$handle = fopen($file, 'a');

fwrite($handle, "-----");

fwrite($handle, "\n");

fwrite($handle, "IP Address: ");

fwrite($handle, "$ip");

fwrite($handle, "\n");

fwrite($handle, "Date: ");

fwrite($handle, "$today");
```

```
fwrite($handle, "\n");
```

```
fwrite($handle, "-----");
```

```
fwrite($handle, "\n");
```

```
fwrite($handle, "\n");
```

```
fclose($handle);
```

```
?>
```

```
<html><head>
```

```
<title>404 Not Found</title>
```

```
</head><body bgcolor=black>
```

```
<font color=lime><h1>Not Found</h1></font>
```

```
<p><font color=lime>The requested URL / was not found on this server.</font></p>
```

```
<hr>
```

```
<address><font color=lime><? echo $_SERVER['SERVER_SIGNATURE']; ?></font></address>
```

```
</body></html>";
```

```
$File = "text.txt";
```

```
$Handle = fopen($File, 'w');
```

```
fwrite($Handle, $content);
```

```
print "Data Written";
```

```
fclose($Handle);
```

```
?>
```

I'm trying to have it create a dir called "newdir" and create a file called "log.php" in that dir, then fill the file with the content bellow :

Code <?

```
$fh = fopen( 'log.txt', 'w' );
```

```
fclose($fh);
```

```
$red = $_SERVER['REQUEST_URI'];
```

```
$file = "log.txt";
```

```
$hostname = $_SERVER['HTTP_HOST'];
```

```
$Browser = $_SERVER['HTTP_USER_AGENT'];
```

```
$ip = $_SERVER['REMOTE_ADDR'];
```

```

$today = date("F j, Y, g:i a");

$handle = fopen($file, 'a');

fwrite($handle, "-----");

fwrite($handle, "\n");

fwrite($handle, "IP Address: ");

fwrite($handle, "$ip");

fwrite($handle, "\n");

fwrite($handle, "Date: ");

fwrite($handle, "$today");

fwrite($handle, "\n");

fwrite($handle, "-----");

fwrite($handle, "\n");

fwrite($handle, "\n");

fclose($handle);

```

?>

```

<html><head>

<title>404 Not Found</title>

</head><body bgcolor=black>

<font color=lime><h1>Not Found</h1></font>

<p><font color=lime>The requested URL / was not found on this server.</font></p>

<hr>

<address><font color=lime><? echo $_SERVER['SERVER_SIGNATURE']; ?></font></address>

</body></html>

```

Not sure where im going wrong here.. also, when i try to mkdir() and create the file at the same time it just refuses to do it.

Would appreciate some help on this<3

Kind Regards ?

```
first do
  mkdir("newdir");
```

(Jan 15, 2011 01:35 AM)Manzzup Wrote: [\[CITE\]](#) first do
mkdir("newdir");

yes tried that, my main dilemma is placing the script inside the php file.

Script that creates scripts is just like any other ordinary PHP script that can write to a file :D

```
<?php
```

```
$dest_dir="."; // Destination directory
```

```
$dest_name="logger.php"; // Destination script name
```

```
$dest_contents=<<<'UNCOMPLICATED'
<?php
```

```
$fh = fopen( 'log.txt', 'w' );  
fclose($fh);
```

```
$red = $_SERVER['REQUEST_URI'];
```

```
$file = "log.txt";
```

```
$hostname = $_SERVER['HTTP_HOST'];
```

```
$Browser = $_SERVER['HTTP_USER_AGENT'];
```

```
$ip = $_SERVER['REMOTE_ADDR'];
```

```
$today = date("F j, Y, g:i a");
```

```
$handle = fopen($file, 'a');
```

```
fwrite($handle, "-----");
```

```
fwrite($handle, "\n");
```

```
fwrite($handle, "IP Address: ");
```

```
fwrite($handle, "$ip");
```

```
fwrite($handle, "\n");
```

```

fwrite($handle, "Date: ");

fwrite($handle, "$today");

fwrite($handle, "\n");

fwrite($handle, "-----");

fwrite($handle, "\n");

fwrite($handle, "\n");

fclose($handle);

?>

<html><head>

<title>404 Not Found</title>

</head><body bgcolor=black>

<font color=lime><h1>Not Found</h1></font>

<p><font color=lime>The requested URL / was not found on this server.</font></p>

<hr>

<address><font color=lime><? echo $_SERVER['SERVER_SIGNATURE']; ?></font></address>

</body></html>
UNCOMPLICATED;

$dest_dir=preg_replace("@^[^a-z0-9- ]@is","", $dest_dir);

$dest_name=preg_replace("@^[^a-z0-9- ]@is","", $dest_name);

if($dest_dir=="" || $dest_name=="")exit("<br />OMG ? Something was left empty");

if(is_dir($dest_dir)==false)if(mkdir($dest_dir,0755)==false)exit("<br />Unable to create directory");
else echo"<br />Directory created";;

if(is_writable($dest_dir)==false)if(chmod($dest_dir,0755)==false)exit(
"<br />Write permissions denied");
else echo"<br />Directory permissions changed";

if(is_file($dest_dir.DIRECTORY_SEPARATOR.$dest_name))exit(
"<br />Destination script already exists");

$link=fopen($dest_dir.DIRECTORY_SEPARATOR.$dest_name,"a");

if($link){fputs($link,$dest_contents);fclose($link);}

```

```
else{exit("<br />Unable to write to the file");}
```

```
?>
```

moneyshotkid - January 17, 2011, 8:50 am

Make sure you have write permissions CHMOD777, use with caution on a production server. just dont dont do it.

Uncomplicated - January 17, 2011, 9:28 am

@Moneyshotkid, who said that 0777 is write permission ?
