Thread: [How to lock any software??](#)

**Verilog** - January 15, 2011, 8:27 pm

lets say i am using windows operating system and i want to lock certain applications..For ex-Mozilla,counter strike and so on...so how will i do that...with the help of a software and without using any software...any ideas??

**Tate** - January 15, 2011, 8:35 pm

Do you want to lock it so that it can't be opened by anyone unless a password is typed? If so, you could zip the exe with winrar and then set a password to it.

**phybe?** - January 15, 2011, 8:42 pm

You could try searching for encrypters. They will lock the application/whatever with a password you can set.

You could use this. Put the programs in the folder and hide it.

You could use this. Put the programs in the folder and hide it.

Interesting. That will compress the files into a hidden folder and then require a password upon opening? Or will that just hide the folder so that it can be opened by command prompt?

It will hide the folder, and it works in a different way, most people don't know. It is different than the classic 'hide' option. I also think I am going to add extra security, to where CMD won't even work.

**Dr. Hobo** - January 15, 2011, 8:49 pm

Make a rule in the windows firewall you can for example deny Steam access to the internet.

**fatal intuition** - January 15, 2011, 9:09 pm

use truecrypt, it's free and has triple 256 bit encryption not using an algorithm rather random mouse movements determine the key lol

Yes, truecrypt uses a random number pool (mouse movement encryption key generator).

Yes. It should do exactly what you need.
