Thread: [Problem whit DarkComet](#)

microsoldier - January 19, 2011, 4:47 pm

When i test no-ip conection i get this:

Localhost was successfully connected to port: 85

LAN (..) was successfully connected to port: 85

don'tneedtoknow.no-ip.org was not successfully connected to port: 85

I portforwarded port 85

What can be wrong?

wisd0m - January 19, 2011, 4:49 pm

www.canyouseeme.org

Try that, also is your password the same on your client/server?

microsoldier - January 19, 2011, 5:14 pm

Password is same, when i infect my self darkcomet show connection

When i use that site i get this : Success: I can see your service on .. on port (85)

Your ISP is not blocking port 85

when darkcomet is on, but when its off i get this:

Error: I could not see your service on .. on port (85)

Reason: Connection refused

san143 - January 19, 2011, 9:46 pm

Even am facing the same problem... Do help someone...

SIM-83552 - January 19, 2011, 9:53 pm

I'm also facing this error, can anybody help me fix this aswell?

lbor - January 19, 2011, 10:18 pm

For me everything worked,until today...same errorr

Joey Tribbiani - January 19, 2011, 10:50 pm

well i guess its a bug , happening to me too but when i am spreading it i am getting successful connections so dont worry just carry on with your spreading :)

uncut - January 20, 2011, 1:59 am

i think its just bug aswell, because i have connections without problem
and i had same problem :)

microsoldier - January 20, 2011, 3:06 am

I get connections to :)))

ponde - January 20, 2011, 5:07 am

I am not sure but if you used Upnp it closes the port automatically when darkcomet is not on

Jesús - January 20, 2011, 5:09 am

It's most likely to be a bug. Have you tried to re-download the program ?

microsoldier - January 20, 2011, 5:52 am

Everything is working, i get connections, thanks for help all

Apex. - January 20, 2011, 6:17 am

If not more hepl getting Victims,testing installs and setting up Different RATS such as BlackShades or CyberGate PM me

Quantum Parallelism - January 20, 2011, 10:37 am

apprently you just have to spread as normal and it will work?

xant - January 20, 2011, 11:08 am

Try making the socket without UpNp, and only forward the TCP port. As far as I can tell the DarkComet port checker isn't working, its more of a bug. Just because yougetsignal or canyouseeme says that your port is closed, doesn't mean it is. (My blackshades just connected to 40+ bots with both of those sites saying that my ports were closed.)

redtube prod - January 20, 2011, 5:18 pm

Can somebody tell me how I can get a free FUD dark comet PM me, thank you.

Zpirit - January 20, 2011, 5:35 pm

The problem is NO-IP, trust me I've worked on this for 6+ months, try using another DNS like DynDNS.

(Jan 20, 2011 11:37 AM)Quantum Parallelism Wrote: [\[CITE\]](#) apparently you just have to spread as normal and it will work?

No thats wrong.

It wont work so no point spreading.
