Thread: [Port Forwarding issue](#)

roxy - January 20, 2011, 12:27 pm

I was trying to port forward my Linkss router and I think I did everything correctly, but when I checked my ports in pfportchecker it said it could not ping my router.

When I checked the UDP it said my port was open, but couldn't ping my router. While my TCP waasn't open at all.

I also tried the Utorrent port forwarding way too, and it didn't work.

If you have any ideas please post here or PM me thanks.

Don't bother with UDP, only TCP.

YaBoiScRiBBLeZ - January 20, 2011, 3:29 pm

Go To Your Router And Forward the ports for both Proticals UDP and TCP Then Go To <http://www.canyouseeme.org/> To Check If open if you still need help PM me and ill help you out.

xant - January 20, 2011, 3:41 pm

Online port checkers will not be able to check if your UDP is forwarded, and most of the time if both are forwarded at the same time, the TCP port will not even be able to be seen.

Use proXPN

helped me a lot

Yes you need both protocols open or the RAT wont 100% work.

Still didnt solve the problem, ing the thread

+ PROxpn kills my bandwidth -.-
