I have really no idea, might be some kind of encryption? Where did you find this?

Omniscient - July 6, 2009, 9:05 am

It's a salted MD5 most likely. The \$1\$ prefix is used by the crypt function in at least both perl and php.

so how can i crack this?

Omniscient - July 6, 2009, 9:32 am

It won't be easy at all and well..nearly impossible. Salted hashes are one of the best methods of encryption that's why it's used so often.

Made it possible.

Those are actually MD5(unix).
